About Us

ACA Pacific is a Regional Value-Added Distribution company established in 1986. Serving for the IT industry in the Asia-Pacific region for more than 36 years, our forte is in selecting and integrating the "Best-of-breed" software and hardware to meet our clients' needs and challenge ourselves in this changing business dynamics.

Since we are a regional company, our teams spread across 6 (six) countries in the APAC region, such as Malaysia, Thailand, Australia, New Zealand, Indonesia, and Singapore. With more than 200 committed staffs and over 30.000 channel partners, we aim to make the complex simple - by combining traditional distribution services with next generation flexible and agile growth strategies - enabling Partners to meet the challenges of today's business environment.

In ACA Pacific, we deliver high-tech products to our customers to ensure the business workflow runs smoothly. From artificial intelligence, 3D designs, engineering and architecture, animation, network security, unified communication, cyber security, AI & IoT, to virtual and augmented reality, we're here to help your business move forward.

It's at the core of everything we continue to do.

Emphasizing end-to-end customer service, ACA Pacific's 'personal touch' provides unparalleled levels of product sales, marketing and technical knowledge and a continued commitment to the profitability of all channel partners - Vendors, Resellers and End Users alike.
Our dedicated and experienced team provides Partners with the tailored support services they need to develop business opportunities and serve their clients better, driving optimal outcomes and empowering revenue growth.

ACA Pacific prides itself on being one of the very few specialist distributors to invest in providing channel partners with genuine value-added services and facilities.

In summary, ACA Pacific engages in aggressive market development through a large national reseller network and always maintains the highest level of sales, marketing, operational and technical support for the benefit of our customers.

Our Solutions

3skeng® Innovative & Intuitive Engineering Software for SketchUp	**Alcatel·Lucent** Enterprise Enterprise Communications, Data Networking & Services	**Ansys** A Comprehensive Software suite that providing access to virtually any field of engineering simulation	**arcserve®** Safeguard Your Data Protect and Grow Your Business	**AtoS** A leader in cloud and digital workplace
AVAYA Contact Center Solution and Unified Communication	**BE NETWORKS** Independent distributor of network and telecom equipment	**bmc** Innovative software solutions that enable businesses to transform into digital enterprises	**BricsCAD®** Best CAD solution for BIM and Manufacture with DWG interface	**CONTEC** Technology for a better life
Delphix Automated DevOps data platform masks data for privacy compliance	**DOKMEE** Document Management Software and Electronic Content Management	**ENSCAPE™** Develops high-quality 3D real-time rendering, visualization, and virtual reality software	**FOUNDRY.** Creates pioneering software for creative industries across Digital Design, Media and Entertainment.	**Fortanix** Deterministic security solutions for your most valuable digital assets
HEXAGON Make it Smarter	**Kodak alaris** Digital Automation Scanning Solution & Images Processing	**levelone** Subjects all of our products under vigorous quality assurance and extensive product	**LiveAction** Award-winning software company designed to simplify real-time analytics, network, and application performance management.	**Lookout** Protect your organization with Lookout, the leader in mobile security
Malwarebytes Malwarebytes protects you against malware, ransomware, and other advanced online threats	**Matterport™** The industry leader for 3D space capture. Our all-in-one platform transforms real-life spaces into immersive digital twin models.	**mendix** A high productivity app platform to build and continuously improve mobile and web applications at scale.	**mind.sight.studios** Developer of Premium And Simple SketchUp Extension	**NSFOCUS** Security Made Smart And Simple
ptc PTC is the Industry's leading 3D CAD Software and IOT solutions for product development	**RAISE3D** Industrial Grade Large Format 3D Printer with Dual Electronic Retracting System	**Resurface** Resurface captures real API traffic data for insights into attacks and threats	**Ruijie** Leading ICT company, headquartered in China. It has been committed to providing innovative scenario-based network products	**SANGFOR** NGAF Firewall, Internet Access Management, WAN Optimization, SLL VPN, Hyper Converged Infrastructure
SECIRON SecIron's trusted mobile security solutions	**SketchUp** 3D Modeling Software for Architectural Interior Design	**snow** The Technology Intelligence Platform	**VISUAL COMPONENTS** Design the factories of the future	**v·ray** Profesional Rendering for Architects & Designers
VERSA NETWORKS Software-defined WAN	**ZWCAD** Best CAD Sortware with Permanent License, Light and DWG Compatible			

3skeng is our 3D Engineering extension for Trimble SketchUp. If you like SketchUp you will like 3skeng. This extension is as intuitive as SketchUp and phenomenal easy to learn. 3skeng has a large professional functional range, for instance as an extension for the design and documentation of MEP and 3D piping and steel structures.

About Product

3skeng Tools - Easy and intuitive

You only need to know the basic functions of SketchUp and you will be able to handle any of our "3skeng tools" in a heartbeat. Focus your energy on your projects with an engineering software solution that is easy and intuitive to handle.

Solution Portfolio

3skeng AR (Augmented Reality) Tool

We have been successfully using SketchUp & 3skeng tools for 3D designs for over a decade now! But ever since the very first release of the Microsoft HoloLens, we felt the huge potential to optimize the very challenging phase of 3D designs becoming reality: construction management! Driven by that vision, we developed 3skeng AR as a tool for both SketchUp and the HoloLens to bring 3D designs into (Augmented) Reality!

3skeng List Tool

3skeng List adds spreadsheet capabilities to SketchUp. Our brand-new extension allows you to interact and work with SketchUp entities in data-based views. List, filter, sort and multi-edit. Create a bill of materials, a parts list or a report and export it to Excel (.XLSX).

3skeng Pipe Tool

We put the "Pipe Tool" to many "real life" tests, constantly work to improve it and enable it to handle our biggest and most complex pipeline and round ductwork designs.

Libraries for 3skeng Pipe Tool detail

Following the conceptual design, you can use 3skeng Pipe in "Detail mode" to handle and create detail design. You can select from many libraries for piping systems of various materials, connection types and standards (ANSI, EN and DIN). Within the 3skeng extension, you can choose and add only those libraries you actually need for your project

3skeng Mount Tool

The "Mount Tool" works with libraries that include real life channel profiles, proper fittings, supports and more. The "Mount tool" enables you to design secondary/support steelwork the same easy and intuitive way you are used to from 3skeng tools.

Libraries for 3skeng Mount Tool

Mount libraries have been created based on market available channel profiles, proper fittings, supports and cantilever arms. Roller bearings, Pipe-clips, -clamps, -straps and -shoes fully integrate "3skeng Pipe" elements in your secondary/ support steelwork designs. A ready-to-install bill of material (BOM) is just a few clicks away.

Steelwork Tool

All you need to draw Steelwork models with straight and chamfered segments. The segments can be connected by nodes. An extensive built-in library allows you to choose from many different standards from all over the world.
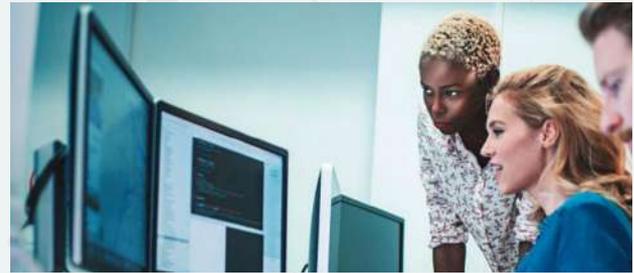

3skeng Channel Tool

We put the "Channel Tool" to many "real life" tests, constantly work to improve it and enable it to handle our biggest and most complex rectangular ductwork designs.

Alcatel·Lucent Enterprise

Alcatel-Lucent Enterprise offers flexible business models that are tailor-made for our customers' industries and provide built-in security and limited environmental impact. Whether you are a small or medium business (SMB) , together we can find the technology solution that connects your teams and customers best.

About Product

ALE is committed to developing technology solutions that work for our customers, connecting people, machine, things and processes, while creating a more sustainable future for all.

Solution Portfolio

Alcatel-Lucent Enterprise solutions deliver powerful and secured communications capabilities to support your business, all furnished by qualified partners and with flexible business models.

Communicate remotely as if in the office

Rainbow by Alcatel-Lucent Enterprise and Rainbow Office powered by RingCentral* offer powerful collaboration features to always stay connected

Add collaboration to your Business Telephony

Integrate always-on collaboration capabilities into your professional Business Telephony system to create a more robust system.

Adapt your collaboration solution to your sector

Thanks to our experience in customized solutions for our clients, we have enlarged our portfolio to offer the following industry-focused solutions:

### Data sovereignty – your top priority

As cyberthreats grow, so does the demand for security. Depending on your company size, the sensitivity of your data and your security expectations, you can choose from different hosting models.

Award

Nov, 2022 — ALE announced as recipient of 2022 Tech Cares Award	Jun, 2022 — Ecovadis CSR rating silver medal	Apr, 2022 — ALE announced as 2022 CIO 100 Award Winner
May, 2021 — Ecovadis Silver medal for 2021	Mar, 2021 — ALE recognized as IDG 2021 CIO 100 Award Winner	Jan, 2021 — TMCnet Remote Work Pioneer Award
2020 — Focus Money study: Rainbow in top 5 in best video conference platforms	Dec, 2020 — Global Communications Platform as a Service Enabling Technology Leadership Award by Frost & Sullivan	Dec, 2020 — ALE positioned as UCC Leader in ISG's German Quadrant Report
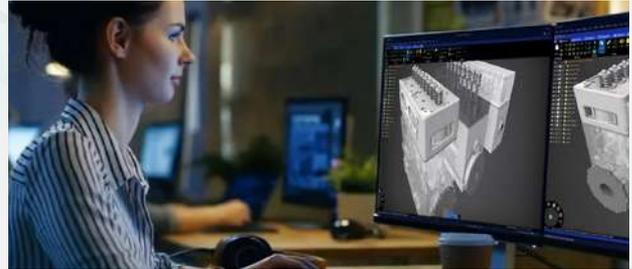

ANSYS Engineering Simulation and 3-D Design Software Delivers Product Modeling Solutions With Unmatched Scalability and a Comprehensive Multiphysics Foundation

About Product

3D DESIGN
Rapidly explore ideas, iterate and innovate with Ansys Discovery 3D design software. With the easy-to-use tools, you can build and optimize lighter and smarter products.

ELECTRONICS
Ansys software can uniquely simulate electromagnetic performance across component, circuit and system design, and can evaluate temperature, vibration and other critical mechanical effects.

EMBEDDED SOFTWARE
Ansys provides a model-based embedded software development and simulation environment with a built-in automatic code generator to accelerate embedded software development projects

FLUIDS
Ansys CFD goes beyond qualitative results to deliver accurate quantitative predictions of fluid interactions
and trade-offs.

MATERIALS
Ansys software ensures accurate, consistent, traceable materials information every time and provides the tools you need to support design, research and teaching.

MISSIONS
AGI's digital mission engineering software allows you to extend your analysis to every phase of the project
life cycle.

OPTICAL
Ansys optical simulation software uniquely simulates a system's optical performance and evaluates the final illumination effect.

PHOTONICS
Products, solvers and interoperability features that work together seamlessly to allow designers to model the most challenging problems in photonics

PLATFORM
The Ansys simulation platform delivers the broadest suite of best-in-class simulation technology and unifies it with your custom applications, CAD software and enterprise business process tools

SEMICONDUCTORS
Ansys empowers customers with multiphysics simulations to simultaneously solve power, thermal, variability, timing, electromagnetics and reliability challenges.

STRUCTURES
Ansys optical simulation with the finite element analysis (FEA) solvers available in the suite, you can customize and automate solutions for your structural mechanics problems and parameterize them to analyze multiple design scenarios.on software uniquely simulates a system's optical performance and evaluates the final illumination effect.

SYSTEMS
the challenge of integrating individual components within a system to ensure they work together as expected.

Solution Portfolio

ACADEMIC
Ansys Academic engineering simulation software is used by thousands of universities globally for undergraduate students to learn physics principles, for researchers to solve complex engineering problems and for postgraduate students to produce data for their master's theses or doctoral dissertations. Additionally, students take advantage of our free student product downloads for homework outside of the classroom, capstone projects, student competitions and more.

AEROSPACE & DEFENDS
Ansys multidisciplinary simulation solutions create the digital thread, which supports the flow of data throughout the product life cycle. From ideation and design to manufacturing and operations, Ansys A&D solutions help accelerate digital transformation and streamline development.

AUTOMOTIVE
Automotive Simulation is more important than ever in vehicle engineering with the innovation surge currently happening in the industry. Smart electronics, infotainment, telecommunications, advanced software – vehicle makers are delivering innovative, groundbreaking technologies to today's consumers. They are also quickly making self-driving vehicles a reality with the introduction of advanced driver assistance systems and autonomous features.

CONSTRUCTIONS
For thousands of years, the construction industry has responded to the issues of its day with innovation after innovation. Today's challenges are centered around saving energy, minimizing operating costs, and improving safety and occupant comfort. To address so many different challenges computer modeling is a must do.

CONSUMER GOODS
Consumer goods manufacturers are using engineering simulation to satisfy clients who are focused on low-cost, durable goods that, increasingly, offer energy efficiency. A product that lacks any of these qualifications may not survive the sales cycle.

ENERGY
The increasing worldwide need for reliable energy at a reasonable cost, combined with growing environmental concerns, has brought energy science and engineering into the global spotlight. Companies are challenged to improve existing power generation technologies, improve energy intensity, reduce energy use, and develop innovative new solutions that balance demand, cost and environmental priorities.

HEALTHCARE
With patient welfare hanging in the balance, disruptive innovation is a permanent concern and product failure is not an option in healthcare. Applying engineering simulation throughout development can make all the difference in bringing new treatments to patients while meeting safety standards and product deadlines.

HIGH-TECH
The proliferation of smart products is driving the need for engineers to improve electronic product design and focus on delivering lower cost, lower power, and higher performance through the integration of discrete functions.

Industrial Equipment & Rotating Machinery
Global trends and market pressures drive engineers to improve industrial equipment, rotating machinery and turbomachinery design, with a focus on delivering performance with improved energy efficiency, safety, durability and range with lower cost and time to market. To achieve targets, developers look at improving all aspects of machine performance.

Materials & Chemical Processing
Simulation solutions for the process industry is helping companies with significant engineering improvement in their asset- and process equipment efficiency and reliability. The required advancements can directly impact product and process performance, sustainable and green engineering, and ultimately corporate profitability.

arcserve®

Arcserve provides exceptional solutions to protect the priceless digital assets of organizations in need of full scale, comprehensive data and ransomware protection. Established in 1983, Arcserve is the world's most experienced provider of business continuity solutions that safeguard multi-generational IT infrastructures with applications and systems in any location, on premises and in the cloud. Organizations in over 150 countries around the world rely on Arcserve's highly efficient, integrated technologies and expertise to eliminate the risk of data loss and extended downtime while reducing the cost and complexity of backing up and restoring data by up to 50 percent. Arcserve is headquartered in Minneapolis, Minnesota with locations around the world.

About Product

Arcserve: The World's Most Trusted Data Protection and Business Continuity Partner

We work with partners and customers worldwide to bring them award-winning business continuity solutions developed by a team that is laser-focused on innovation, simplification, and your business's success.

Assuring Your Assets are Secure, Accessible, and Optimized—All the Time

For decades, we've been solving the data protection challenges of IT teams to ensure businesses run smoothly—no matter the size, the location, or the industry. We've redefined the way companies manage and protect their data, delivering best-in-class solutions that support scaling, next-gen data workloads, and multi-tenant infrastructures.

Solution Portfolio

With Arcserve, your business data is in safe hands. Our best-in-class, next-gen solutions ensure your assets are secure—everywhere, anywhere, every time. Defend your data with all-in-one data protection and management solutions designed to be the right fit for your business, regardless of size or complexity.

Defend Against Ransomware

Tackle today's cyberattacks head-on with our award-winning threat prevention, detection, and ransomware recovery technologies.

Minimize Downtime

When the worst happens, we make sure you get business operations running in an instant and avoid hundreds of hours of lost productivity.

Prevent Data Loss

Avoid costly business disasters and reputational damage from data loss. Our backup and recovery solutions ensure near-zero impact to your business.

Protect Cloud and On-Prem Workloads

Ensure your data and systems are always secure, accessible, and optimized with our best-in-class solutions.

Reduce IT Complexity

Give your teams the gift of time by eliminating the need for complex system integrations and managing data protection from a single console.

Cut Data Protection Costs

Simplify your operations and drastically reduce your operating costs. We have the broadest and most affordable set of solutions in the market today.

Award

Atos

Atos is a global leader in digital transformation with 111,000 employees and annual revenue of c. € 11 billion. European number one in cybersecurity, cloud and high-performance computing, the Group provides tailored end-to-end solutions for all industries in 69 countries. A pioneer in decarbonization services and products, Atos is committed to a secure and decarbonized digital for its clients. Atos is a SE (Societas Europaea), listed on Euronext Paris

About Product

Creating the unprecedented levels of connectivity needed for digitally transformed business demands a special mix of business and technical skill. Atos has the depth of technical expertise, the industry-specific knowledge and the depth of specialist partnerships you need to create newly connected products and services. As a system integrator, Atos has strong relationships with, amongst others, Amazon, Microsoft, PTC, SAP and Siemens. We also manage the worldwide connectivity needed for global business, either working with Network Operators and acting as a Mobile Virtual Network Operator.Perhaps most importantly, we also offer accelerated trial and development labs, allowing you to fast-track innovated and ever-more connected products and services.

Solution Portfolio

Advanced Computing

AI & Business Computing – HPC & Quantum overview

- HPC driving your AI to accelerate

The Atos ThinkAI solution enables enterprises and researchers to strategize, architect, build, and deliver scalable, energy-efficient, high-performance AI solutions in weeks. By orchestrating hardware, software, and expertise in digital security, customers can benefit high-performance AI solutions at optimized cost.

- AI for Edge & Business computing

Your choice if you have no data science internal resources or time to build and train your AI models. We provide you AI models based on +100 templates with >99% accuracy. Also, benefit from live reports and real time alerts with deployment at the edge. Anywhere you want to run AI models, on the cloud or on our BullSequana EX and BullSequana SH servers.

Analytics, AI & Automation

Data & Analytics, Automation and AI

Driving Digital Transformation by harnessing the power of Data & Analytics, AI and Automation to help clients transform their business processes, modernize data architectures and derive intelligent business insights

Atos Engaged Employee Experience

According to Gartner, 70% of business leaders agree that employee engagement is critical to achieving business results. That's why employee experience is at the heart of Atos Digital Workplace Services. Fully engaged employees lead to improved customer satisfaction and better business outcomes.

Atos OneCloud

Our capabilities and deep industry expertise uniquely position us to support customers as the world leader in operating hybrid and multi-technology application platforms. Our expertise is rooted in real-world experience designing and managing applications for thousands of customers and operating over 50 data centers around the world.

Customer Experience

We partner with our clients to help accelerate their customer-obsessed digital transformations

Cybersecurity

With a global team of over 6,000 security specialists and a worldwide network of Security Operation Centers (SOCs), Atos offers end-to-end security partnership.Our portfolio brings the power of big data analytics and automation to our clients for more efficient and agile security controls. Our six building blocks — all linked to analytics and automation — bring efficiency to our clients to better protect their critical data: personal data, intellectual property, financial data, and more.

Decarbonization

Make it happen, Leading action towards Net Zero

Net-zero emissions is a state when we achieve a balance between greenhouse gases (GHGs) emitted and removed from the atmosphere. It requires rapid decarbonization in line with a 1.5 degree trajectory and carbon removal equivalent to any emissions remaining, via nature-based solutions.

Digital Consulting

Digital Transformation Consulting, Trusted advisor for your digital journey, Digital empowerment brings people, business and technology together.

Internet of Things (IoT)

Delivering smart business services that harness the value of your IoT data.

Infrastructure & Foundation Services

Designing, building and managing digital infrastructures With +25-year of experience, we are a trusted partner for CIOs to manage, modernize and innovate their vital systems.

Modern Applications & Platforms

AVAYA

Avaya offers maintenance options to fit your business' growing needs. Through our network of authorized partners, expert support options provide remote technical support as well as access to updates and service packs to keep your systems functioning with high reliability. Support options include major software upgrades for increased investment protection, with enhanced remote access to help ensure faster issue resolution, increased speed of service and security.

About Product

Delivering experiences that matter

Go with Avaya to get the most out of your business communications—whether on prem, in the cloud, or hybrid—and enhance every experience for customers and employees alike.

What happens in an Avaya minute

Every minute of every day, we power positive and productive interactions that drive customer loyalty, team collaboration, and business success.

Solution Portfolio

Composable Solutions

To effectively build composable communications, enterprises around the globe are taking a new, multi-cloud approach.

Customer Experience

Listen to "The Experience" for thought-provoking conversations about how your enterprise can gain advantage in the Experience Economy by creating memorable interactions for customers and employees alike

Work From Anywhere

It's how people work now: at home, on the go, in the workplace—and all at the same time. It's critical to ensure a team that's spread apart is working like they're together.

Healthcare Provider

Your care team's ability to communicate with patients along their health journey is vital to the mission of supporting care plans and reducing readmissions.

Healthcare Payer

The right cloud-based, healthcare-ready solutions deliver personalized experiences for your members, member services, other employees, and partners

Education

Cloud-based computing, mobile connectivity and streaming video enable collaboration and learning to take place anytime and anywhere.

Financial Services

Imagine your bank delivering cloud-based, in-the-moment experiences to employees and customers alike—without straining IT resources or provoking business risk.

Media and Entertainment

Your growth depends on delivering epic customer experiences that lead to great reviews, referrals, and net-new relationships.

Public Sector

Our open, converged solutions—available in the cloud, on-premise, or a hybrid of both—enhance and simplify your communications.

Award
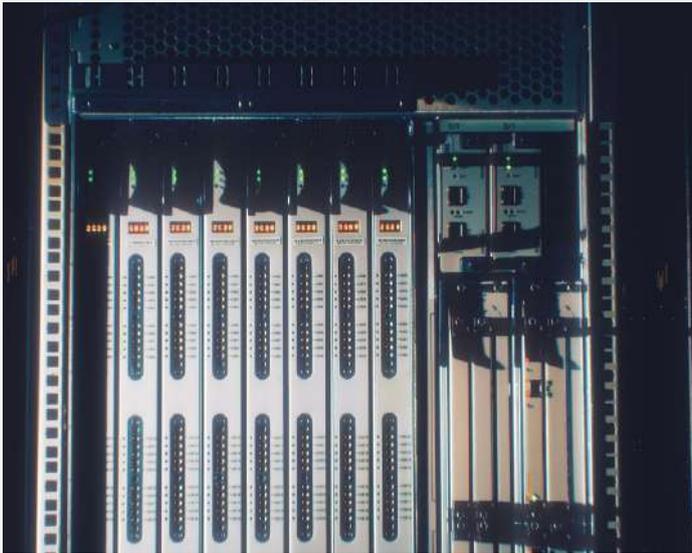

BE NETWORKS

BE Networks offers you a great solution to the overkill of tech assets on the market, while we provide high-end products — Cisco, Juniper, and many more — within affordable, smart solutions and a responsible footprint.

About Product

BE Networks offers you a great solution to the overkill of tech assets on the market, while we provide high-end products — Cisco, Juniper, and many more — within affordable, smart solutions and a responsible footprint.

And we don't just sell the products and leave – we've always partnered with our customers to form long-term working relationships. We want you to benefit from our service, our unique processes and our expertise for a long time to come.

Plus the planet can be a little grateful too, since we support the circular economy and keep quality assets in use, rather than ending up as landfill. A future with excellent tech, in budget and with great partnerships? We can all be happy with that.

Solution Portfolio

End-of-life equipment Supply
Providing legacy equipment that OEM's no longer manufacture in solutions tailored to your needs.

IT Budget Optimization
Complementing OEM's offerings with adjacent refurbished components at the most competitive prices.

Supply Chain Acceleration
Fast delivery of urgently needed equipment, directly from out warehouse to your facilities.

Award

bmc
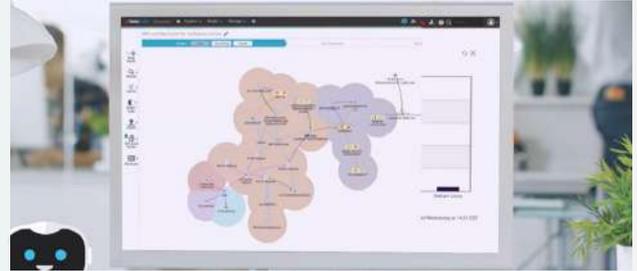

BMC is a global leader in innovative software solutions that enable business to transform into digital enterprises for the ultimate competitive advantage. BMC provides the best solution for Information Technology (IT) Service Management and Service Operation. The solution offered is user-centric, build in proven platform and proven to be implemented in any infrastructure to support Critical business.

About Product

The comprehensive IT management portfolio helps companies in every industry harness opportunity and deliver value with competitive differentiation

Solution Portfolio

IT Service Management

Intelligent ITSM solutions that are fast, accurate, and cost effective, whether you want to operate in the cloud, in a hybrid model, or in your own data center

IT Asset Management

The set of business practices that join financial, contractual and inventory functions to support lifecycle management and strategic decision making for the IT environment.

IT Workload Automation

Simplifies application and data workflow orchestration to build, define, schedule, manage, and monitor production workflows, ensuring visibility, reliability, and improving SLAs

Data Center Infrastructure Management

The converged of IT and it's facilities function to provide holistic views of Data Center performance.

IT Operation Management with AI (AIOps)

Apply machine learning and predictive capabilities across IT operations and DevOps environments for real-time, enterprise-wide observability, insights, and automated remediationt

Award
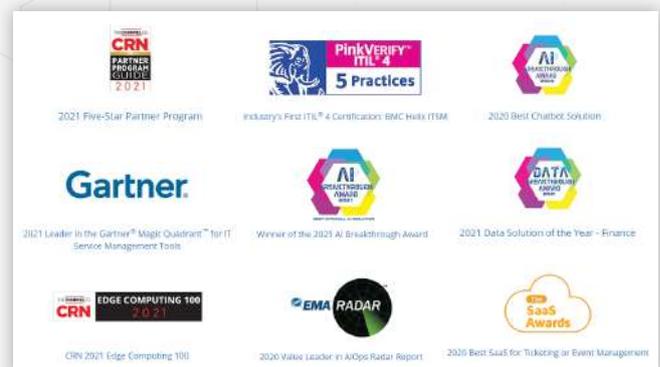

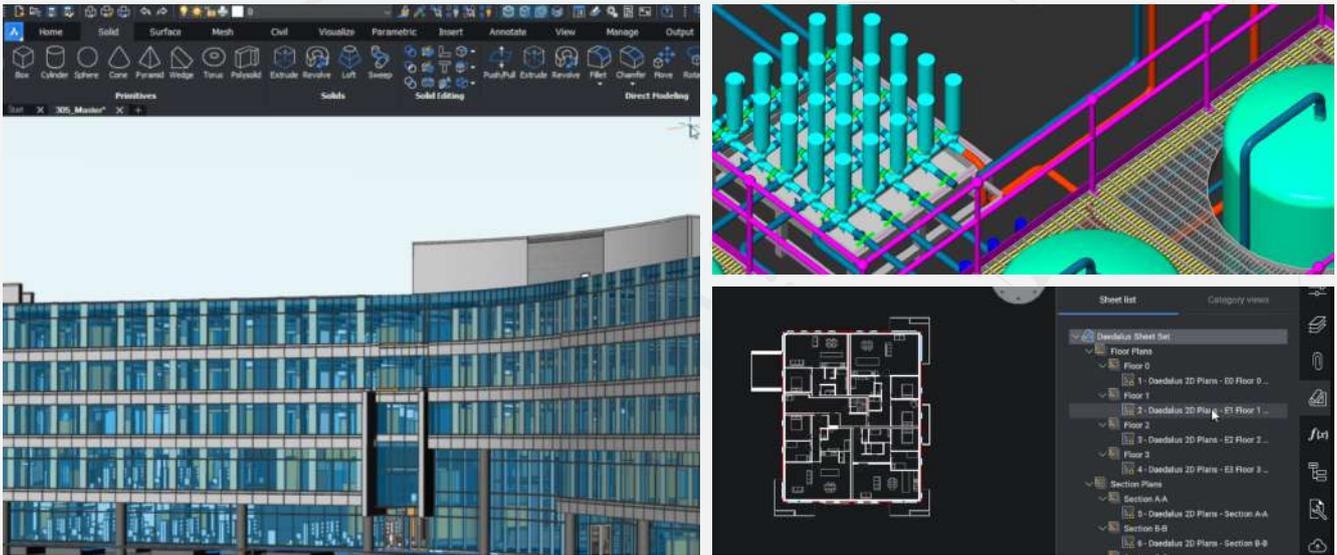

BRICSCAD

BricsCAD is a software application for computer-aided design (CAD), developed by Bricsys nv. The company was founded in 2002 by Erik de Keyser a longtime CAD entrepreneur. In 2011 Bricsys acquired the intellectual property rights from Ledas for constraints-based parametric design tools, permitting the development of applications in the areas of direct modeling and assembly design. Bricsys is headquartered in Ghent, Belgium, and has additional development centers in Nizhny Novgorod and Novosibirsk, Russia; Bucharest, Romania and Singapore.

About Product

Flexible Licensing

Bricscad offers subscription license where you can buy it with lower and fair price, and perpetual license where you can own it, forever.

Approachable & Responsive

Bricscad offers 24-hour turn-around customers' support requests. Bricscad also offers article, tutorial, e-books and guides which you can download, for free

Solution Portfolio

BricaCAD® BIM

Software for everyone Move to BricsCAD® BIM and turn your design concept with the power of artificial intelligence to help you automatically replicate details and machine learning to automatically classify building elements. All in BricSCAD® BIM.

BricsCAD® Mechanical

Advanced Mechanical Design Take your 3D modeling to a whole new level with BricsCAD® Mechanical. Create parametric components from constrained 3D solids, import data from popular MCAD formats such as Solidworks, Inventor, and Creo. BricsCAD® Atechanical got you covered.

CONTEC

Contec is a global electronics manufacturer and systems integrator. We specialize in embedded computing, industrial automation, and M2M/IoT communication technology. Our products are used around the world in factory automation, transportation, medical and life sciences, robotics, security, energy, government, and beyond.

About Product

As an electronic device manufacturer, Contec develops creative technologies in the fields of industrial computers, measurement and control, and networks; use these technologies to provide products and solutions to society; and thereby strive to make contributions to society.

Business areas Creative Technology Solutions Tailored to Fix Real Business Problems

Contec is a company of passionate problem solvers. We are on a mission to develop innovative solutions for the real business challenges our customers face every day. Our unique combination of products and services increase productivity, improve efficiency, and reduce cost. We achieve this through world-class engineering, unsurpassed quality, and more than 40 years of industry experience.

Contec is a global electronics manufacturer and systems integrator. We specialize in embedded computing, industrial automation, and M2M/IoT communication technology. Our products are used around the world in factory automation, transportation, medical and life sciences, robotics, security, energy, government, and beyond.

Solution Portfolio

GENERAL MANUFACTURING

CONTEC: Pioneer of Measurement & Control Technology for Automations

As a pioneer of the measurement & control by micro electronics, CONTEC offers a vast lineup of reliable and high performance products that can support various sensors and actuators. Based on its expertise in highly reliable technology with electronic devices for factory automation since our establishment in 1975, we provide FA control equipment and systems that can optimize automation, research and development, production processes, and maintenance.

CONTEC proposes IoT system based on open technologies that compliant with international standards such like open platforms and programming environments which are independent on specific manufacturers as well as field networks not depending on specific / proprietary communication protocols.

MEDICAL & HEALTH CARE

Providing a Long-Term Supply of Global Computers

Medical devices are usually replaced after having been used for five years or more. PCs for medical devices may also be recognized as medical devices. The five-year supply and six-year maintenance guidelines CONTEC implements for its industrial computers are the reason they are chosen by many medical device manufacturers.

The fact that CONTEC is able to obtain the certifications required to export or develop products overseas is also a major asset of the group. CONTEC is a business partner for your global development.

CONSTRUCTION & BUILDING

CONTEC for All Your Building Automation Needs

From the supply of embedded computers and network equipment for device control, information management, and authentication, to comprehensive assistance. CONTEC meets a wide variety of needs in building automation with reliable electronics technologies developed in the industrial field.

We solve your by utilizing our open technologies such as demand control in lighting and air conditioning, CCTV, elevator monitoring, signage inside elevators, and control devices for residential API/ECHONET communication.

AUTOMOTIVE INDUSTRY

CONTEC: a Good Partner of Automotive Industry

Automotive industry is one of the most proven field of CONTEC with supplying huge amount of automated painting system and tracablity system for manufacucturing information systems.

CONTEC can propose most optimum system that meet your various demands with the market leading proven know-hows, that realizes supply of ICT system to aggregate all sort of information from various production equipment real time, prevention system for assembly error by operator, production management system etc.

LOGISTICS

Contec for the Stable Distribution System Operations

Wireless handy terminals are indispensable to manage distribution and inventory through barcodes. Ideally, all devices, including other on-site devices, should be able to communicate wirelessly. However, normal operations are sometimes impeded due to communication dead zones or communication quality issues. CONTEC's FLEXLAN wireless LAN solution is less susceptible to radio interference and prevents communication quality degradation. A smooth communication environment can be achieved through business features such as a repeater function that covers all dead zones using multiple wireless stations.

We also have a wealth of experience in developing business systems such as EC-compliant inventory management systems, voice-activated picking systems, and digital assortment systems (DAS).

AGRICULTURE

Agriculture as a Manufacturing Industry.
"Smart Agriculture" with Measurement and Control Technologies.

Agriculture can be seen as a Manufacturing Industry. CONTEC's measurement and control technologies can also be used in the agricultural sector.

CONTEC's controllers have excellent environmental resistance and can be operated stably even in environments where the temperature varies as outdoors. Sensing the environment of greenhouses, and controlling automatically based on acquisition data. We contribute to automating the watering process, which is a skill that takes 10 years to master, achieving quality control of local branded products, solving agricultural issues, and further increasing production volumes.

SOCIAL INFRASTRUCTURE

High Added Value with CONTEC's IoT Technologies

CONTEC has delivered many kinds of remote monitoring system that make use of wide-area communication networks to water treatment facilities, dams, as well as solar power generation and wind power generation plants.

Data are collected from your on-site equipment and then integrated into a cloud storage service to provide a mechanism that enables you to see from anywhere the operating status of your equipment scattered across the country. Such collected data are used to help the newly created maintenance service business and data analysis which generates new knowledge.

ENERGY

CONTEC for All Your Remote Monitoring System

CONTEC has delivered many remote monitoring systems that make use of wide-area communication networks to water treatment facilities, dams, as well as solar power generation and wind power generation plants.

Particularly in the field of solar power generation, we have developed a dedicated package system for the SolarView brand as a turnkey solution which has been introduced at more than 30,000 power stations. We began offering a new package system compatible with the revised FIT Law for the Japanese market. The system is a combination of sophisticated monitoring display functions and power conditioner output control functions.

TRANSPORTATION

CONTEC'S Robust Devices furnished for Industrial Applications

CONTEC provides in-vehicle computers for buses, special purpose vehicles as well as computers for rolling stocks compliant with railway standard EN50155. We offer optimum products and solutions by our vast experience in digital signage, location management and fleet management.

We realize your challenges using cutting-edge technologies such as information terminal for forklifts / automated guided vehicles at wharf, distribution centers, and in factories, as well as wireless LAN systems for mobile communications.

EDUCATION

Advantage of Wireless LAN Designed by CONTEC

CONTEC's wireless LAN options support various wireless LAN systems ranging from the smallest to the largest. We can create the optimal ICT environment that best suits the individual characteristics of each educational facility. We propose wireless LAN environments that can be managed without the need for any special IT skills and that can be placed anywhere, and moreover, within budget constraints.

Communications are encrypted using a proprietary security function, the educational facility's important data are protected from eavesdropping as well as from leakage, and the burden placed on the administrators is reduced.

Delphix
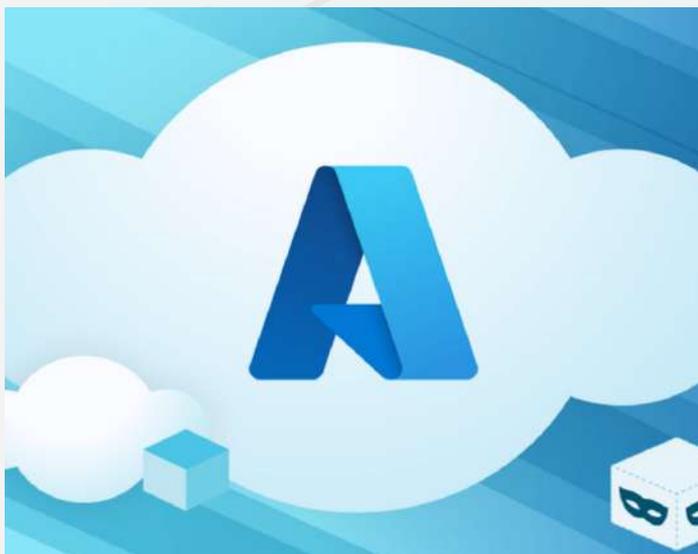

Automated DevOps data platform masks data for privacy compliance, secures data from ransomware, and delivers efficient, virtualized data

About Product

We believe data can change the world. We are passionate about helping enterprises use data to accelerate data-driven transformation.

Our DevOps Data Platform combines enterprise - wide data coverage with data compliance to enable modern CI/CD workflows, accelerate the journey to the cloud, transform customer experiences and increase the adoption of disruptive AI technologies.

Solution Portfolio

Agile, DevOps, and CI/CD

Application releases are slow and error-prone, stifling innovation

Without test data automation, application transformation projects lack the data-ready environments needed to accelerate releases.

Strategic use of test data is the catalyst to innovation

Transform application delivery across the multi-cloud, while protecting data privacy and security.

Deliver fast, compliant data for TDM, CI/CD, SRE and more —all driven by APIs

- Test Data Management
- Modernize test data for the world of DevOps, multi-cloud, and Zero Trust to deliver fast, high quality releases
- DevOps & CI/CD
- Conquer the last automation frontier—data. Support millions of CI/CD runs per month to achieve radical rates of innovation.
- Site Reliability Engineering
- Automate data delivery in SRE workflows to dramatically reduce downtime for business critical applications.
- Modernization to Multicloud
  Fuel cloud innovation by enabling DevOps test data management.

Market responsiveness demands test data evolution

Unchecked data constraints create a bottleneck in application modernization and cloud adoption initiatives.

Transform test data management to accelerate cloud innovation

Automate secure, efficient, cloud-ready test data to accelerate the journey to multicloud.

Data Compliance & Security

We believe data can change the world.

We are passionate about helping enterprises use data to accelerate data-driven transformation.

Our DevOps Data Platform combines enterprise - wide data coverage with data compliance to enable modern CI/CD workflows, accelerate the journey to the cloud, transform customer experiences and increase the adoption of disruptive AI technologies.

We love our customers

We care about having a positive impact on our customers. We serve the world's leading brands in retail, consumer packaged goods, financial services, telecom, and more to uncover new opportunities, innovate faster, and deliver game-changing digital experiences.

DOKMEE
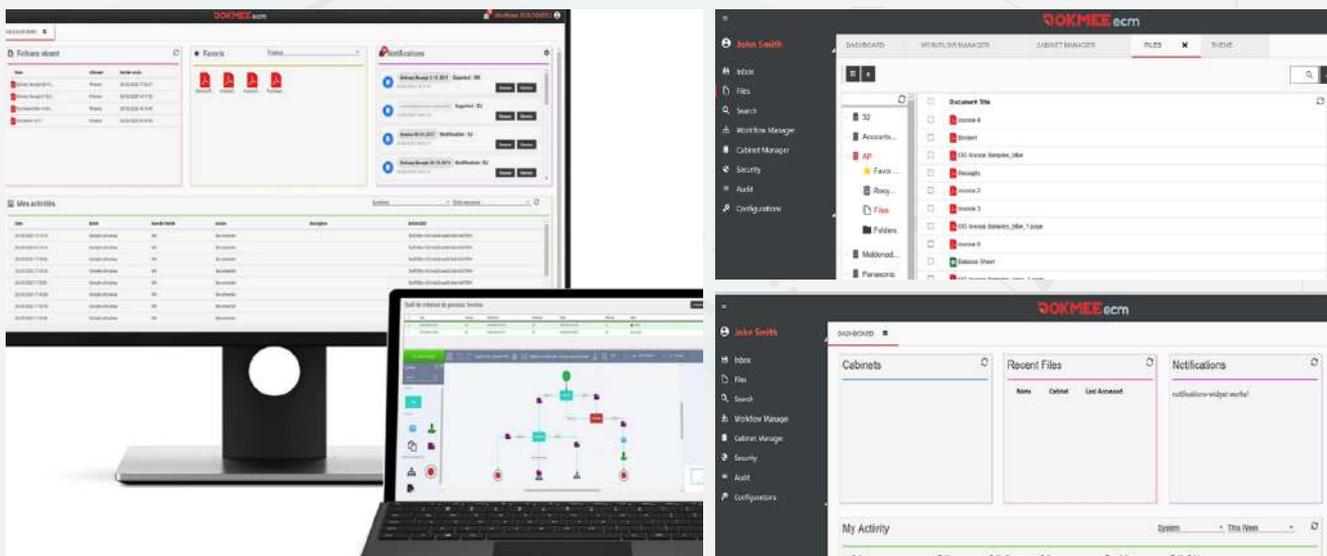

Dokmee specializes in delivering integrated software solutions for the management, imaging, scanning, and collaboration of mission-critical business documents for enterprises around the globe. Headquartered in Houston, Texas, with locations worldwide, Dokmee offers a full suite of products, including Dokmee Capture – a fully automated data capture software; and Dokmee ECM – a feature-rich enterprise content management software. Dokmee Capture and Dokmee ECM are used by thousands of customers in more than 30 countries.

About Product

As a global software developer, Dokmee's array of software solutions are aimed at the Enterprise Content Management (ECM) and scanning industry. We distribute these solutions through an immense worldwide network of value-added resellers (VARs).

Solution Portfolio

Accounting
Invoices, P.O.'s, receipts and so much more make up the daily operations of an organization.

Automotive
It is a necessity for Automotive organizations to store and manage files efficiently and accurately.

Education
Optimize back-end processes so you can focus more on your students, teaching and classroom.

Energy
Dokmee can automate your back-end processes while optimizing organization and management of projects.

Goverment
State and Local government deal with a number of files that come in daily that can be time consuming and a hassle.

HealthCare
In the Health Care industry having the most up to date information on a patient is essential as a doctor or nurse

Human Resources
For your company to gain success you need the proper tools to mange, support and train.

Insurance
Route claims, estimates, and refunds can be a hassle and quite time consuming.

Legal
Law Firms and Legal Departments deal with a high volume number of files that come in daily.

Logistics
Freight bills, terms of sale, and bill of lading can be time consuming and daunting when the information is misplaced.

Manufacturing
Vendor management, reports, CAPA procedures and so much more make up the daily operations of a manufacturing site.

Real Estate
Regardless of your position or title in the Real Estate industry, time is your number one variable.

Award

ENSCAPE™

Enscape develops high-quality 3D real-time rendering, visualization, and virtual reality software for architects, engineers, and construction (AEC) professionals

About Product

Enscape develops high-quality 3D real-time rendering, visualization, and virtual reality software for architects, engineers, and construction (AEC) professionals. Enscape gives designers the power to create realistic renderings based on their existing planning data and automatically produce videos, panoramic images, and VR simulations. Enscape software is used by renowned architecture firms in over 150 countries and is enjoyed by more than 200,000 unique users every month. The company's corporate headquarters is in Karlsruhe, Germany, and has an office in New York, USA. Learn more at enscape3d.

Solution Portfolio

Architectural visualization

Architectural visualization allows you to quickly and easily visualize your projects in a matter of seconds. Used by 85 out of the top 100 architecture firms, Enscape is an architectural visualization solution that instantly transforms your design into a 3D model for you and your clients to explore. As a real-time rendering solution that plugs directly into your modeling software, Enscape makes architectural visualization fast and simple. And our users strongly agree – 92% of customers believe that Enscape helps to speed up their design process, according to our 2021 survey. Architectural visualization is the process of transforming design ideas into 3D projects, allowing architects and designers to experiment with their design ideas and visually communicate them to clients and stakeholders.

Fast and Easy Software to Visualize Your Projects
With Enscape, no exporting or importing of files is required, meaning that you can visualize immediately from within Revit, SketchUp, Rhino, Archicad, or Vectorworks. With real-time visualization firmly integrated into the entire design process, the communication of your ideas is effortless, helping to speed up decision making and approvals. Architectural rendering is now accessible to the entire team and no longer needs to be outsourced, allowing firms to save both time and money

Visualizing Architecture Like Never Before
A staggering 98% of Enscape customers find that using real-time rendering helps them to communicate their ideas. 3D architectural visualization significantly reduces the risk of misunderstanding, since it enables everyone to view a building or space from the same perspective. Take a look at this short video to see how Enscape is transforming 3D building visualization, making it accessible to all, including your clients, contractors, and stakeholders.

Feature-rich plugin that simply integrates into your CAD
Enscape is unlike other rendering tools as it integrates directly within your CAD or BIM program– with Revit, SketchUp, Rhino, Archicad, and Vectorworks currently being supported. This means that you can design and visualize from just one tool, helping to speed up your entire design workflow. In addition to offering fast and realistic renders, Enscape is a building visualization tool that comes with a vast number of features to help you visualize your work, communicate your design intent, and collaborate with colleagues. You can walk and fly through projects, create panoramas and animations, export your files in a number of different formats, display animated vegetation, and video textures, add and share annotations, view BIM data, immerse yourself into virtual reality, and much more.

Realistic models at your fingertips
To help bring your projects to life, Enscape comes with a substantial asset library full of high-quality models ready to drop straight into your designs. Access 3D people, furniture, vehicles, vegetation, accessories, and additional assets to heighten realism within your scenes. With our Custom Asset Library, you also have the option to import your own assets, giving you the chance to customize your projects with branded elements and specific objects.

Architectural virtual reality

Virtual reality (VR) is a hot topic in architecture and for good reason. Many Enscape users are experimenting with virtual reality in architecture design and are already using it in their daily business. A VR architectural presentation provides you with a full 360 view – enabling you to get a feeling for space and design and perceive the actual scale of a project. We started Enscape in 2013 with the vision that one day every architectural project can be experienced in virtual reality. With virtual reality, you create an immersive 3D experience that touches clients emotionally and presents architectural ideas in the best way possible. Since everyone gets to engage and experience a model in a life-like simulation, it's easier to discuss details that may not be so easy to see and comprehend in another format. It's simple to use as well – just one click, and the VR headset will start displaying your model in Enscape, allowing everyone to experience a building before it's built. As the cost of headsets such as Oculus Rift, HTC Vive, or Microsoft Mixed Reality have dropped significantly, virtual reality is now a feasible option for all modern architects and designers. Find out more about Enscape-supported headsets for VR architecture here, and all you need to know about virtual reality headsets on our Knowledge Base.

SketchUp, Revit, Rhino & ArchiCAD, VR with just one click!
Start virtual reality architecture directly from your project in Revit, SketchUp, Rhino, Archicad, or Vectorworks without changing your workflow. Architects and designers get a better feel of a project and enhance their productivity and iteration process. Navigating through your model is easy. Select view from favorites and take screenshots from within virtual reality. Presenting and reviewing projects has never been easier. Explore use cases of virtual reality in architecture here.

Virtual architecture, your live link from BIM
Modern and innovative architects always try to add more value for clients. Virtual reality is the key for more immersive and interactive experiences. How else can customers perceive their projects up close, feel changes in spatial planning immediately, and walk through projects themselves? Even though virtual reality has been around for some years, it was video gaming that pushed it as a mainstream option. Notable firms such as KPF, Foster + Partners, ARUP, LHB, and Hassell have chosen virtual reality architecture with the Enscape plug-in to optimize their workflow and presentations.

BIM Management

Enscape is a real-time rendering and virtual reality plugin that integrates into building modeling software, providing a unified visualization and design workflow across all project phases. It is compatible with BIM tools Revit, Archicad, and Vectorworks, and CAD tools SketchUp and Rhino.

Key advantages of BIM and Enscape

•**Easier collaboration**
Using Enscape for a clearer overview of the building than is possible through the BIM interface can help with better time and resource allocation. This enables design teams and project stakeholders to work more efficiently and effectively together.

•**Enhanced project workflow**
What do Enscape and Building Information Modeling mean in architecture? It means getting a more accurate overview of the finished product by being able to explore your design model in an immersive environment. This can also result in faster decision-making, easier collaboration, and an overall improved process.

•**Informed decision making**
Where BIM is used, Enscape provides a way to bring visual legibility to the model. Using Enscape to view a BIM model enables designers to better understand the building, providing critical data to make better design decisions faster

•**BIM info**
BIM mode places all the information you need right at your fingertips. Just click on any single or grouped elements in the Enscape window to immediately display all available BIM data. Or, search for an element in our BIM mode menu and instantly see one or all instances of the object highlighted in the Enscape window

Landscape architecture rendering

Enscape's landscape rendering program plugs directly into your modeling software, giving you an integrated design and visualization workflow. It is the easiest and fastest way to turn your landscape designs into immersive 3D experiences by eliminating the inconveniences of production, shortening the feedback loop, and giving you more time to design.

Why landscape architects choose Enscape

•**An integrated workflow**
BIM and CAD modeling and visualization are finally united with Enscape. Unlike other landscape rendering softwares you don't have to stop design to create high-quality visuals,

•**Intuitive usage**
The simplicity of Enscape has made it a favorite for many AEC professionals. Compatible with Revit, SketchUp, Rhino, Archicad, and Vectorworks, ilt doesn't require prior specialized knowledge; start it alongside your chosen design application to create stunning 3D renderings.

•**Flexible license model**
Enscape's 3D landscape design software is suitable for small architecture firms and large offices alike. Find the perfect plan for you with one of our affordable license options.

3 Features that will boost your work as a landscape architect

•**Powerful export functions - share your work**
From batch exports, to 360° panoramas, video exports, or even as a web standalone. From now on you can share your work with anyone – without any additional software.

•**Atmosphere settings - enhanced realism**
Atmosphere settings such as cloud settings, time of day or image effects like cinematic view.

•**Asset library - create vibrant rendered landscapes**
With over 3,000 assets, our ever-expanding asset library will help you to fill your scene with life and make it even more realistic.

•**Enscape, a community of creativity**
"Now, with Enscape, our clients are amazed with what we show them. They are able to actually experience their project before it is even built. Enscape helps us to do a better job." Devin Canton, Associate & BIM Manager, HMFH Architects

•**Watch how Enscape enables a seamless design and visualization workflow**
In this video Jonathan Reeves shows how easy Enscape for Vectorworks is and focuses on the seamless integration with Vectorworks. Using Enscape you can easily render stunning images and animations from your Vectorworks 3D models in real-time.

Interior Design

Why interior designers choose Enscape
•**Super-fast rendering**
•**Win more work**
•**Explore in virtual reality**
•**Easy to use**

MEP in construction

To understand how MEP systems fit into overall building design and operation, clients and project teams increasingly rely on 3D virtual models and real-time visual aids. Technology has disrupted the MEP industry in recent years. Into the mid-2000s, engineers and architects relied on time-consuming 2D drawing overlays to manually identify and prevent "clashes" between MEP systems. But the advent of 3D modeling software has streamlined MEP coordination as never before. Today, instead of layering hundreds of static drawings, engineers and builders use real-time virtual 3D building models to manage MEP in construction. To optimize workflow and handle requests for information (RFI), MEP professionals rely on 3D collaborative models that visualize MEP systems in real time. MEP engineering has been revolutionized by building information modeling (BIM) and management. With Enscape's convenient special views feature, you can intuitively visualize your MEP systems design during meetings. Enscape works with MEP software such as Revit and Sketchup to provide panorama views of 3D models to give your clients a better perspective on how MEP systems will look in their interiors. Thanks to Enscape's real-time rendering and virtual reality possibilities, MEP in construction is more accurate, efficient, and user-friendly than ever.

Fortanix

Fortanix is a data-first multi-cloud security company and a pioneer in Confidential Computing. Today, data is spread across clouds, SaaS, applications, storage systems and data centers. Fortanix decouples security from infrastructure to address the challenges of securing sensitive data, wherever it may be located, across its entire life cycle, whether it is at-rest, in-motion or in-use.

About Product

Fortanix secures data, wherever it is. Fortanix's data-first approach helps businesses of all sizes to modernize their security solutions on-premises, in the cloud and everywhere in-between. Enterprises worldwide, especially in privacy-sensitive industries like healthcare, fintech, financial services, government, and retail, trust Fortanix for data security, privacy and compliance. Fortanix investors include Goldman Sachs, Foundation Capital, Intel Capital, In-Q-Tel, Neotribe Ventures and GiantLeap Capital.

Solution Portfolio

Multicloud Data Security

Fortanix secures sensitive data across public, hybrid, multicloud and private cloud environments, enabling customers to operate even the most sensitive applications in any environment.

Database Encryption

Fortanix simplified database encryption by providing a single integrated key management and hardware security module (HSM) to manage and store cryptographic keys across all your databases.

Encryption as a Service

The Fortanix solution delivers a cloud-scale pervasive data security platform that provides cryptographic services, secrets management, and tokenization across cloud and on-premises environments from a single centralized point of management, control, and audit.

Secrets Management

Fortanix provides a secure secrets management solution that can manage application secrets natively in the cloud and on-premises.

Confidential Computing

Fortanix offers the most complete solution for confidential computing – providing customers the fastest and easiest path to protect their applications and data while in use.

Tokenization

Fortanix helps enterprises secure their sensitive data and achieve privacy compliance with a cloud-based integrated solution for Tokenization, Key Management and Encryption

Award

FOUNDRY.

Foundry creates pioneering software for creative industries across Digital Design, Media and Entertainment

About Product

Pioneering Software for Creative Industries. Our products help tackle complex visualization challenges to meet the demands of your customers and projects. With over 20 years of industry know-how and a focus on speed, quality and user-experience, we save you time so you can spend it bringing incredible ideas to life.

Solution Portfolio

Animation

Tackle rising animation demands with a suite of industry-standard tools, designed to give you everything you need to perfect your next animated production. From storyboards and compositing to lighting and look development, artists and studios use Foundry tools to expand their creativity and smash deadlines.

Seamlessly create animation content

The quality of animation is at an all-time high and with it comes increased complexity of the shots needed. Foundry's suite of tools gives you complete control over your shots so you can easily tackle complicated 2D and 3D animation sequences, break down creative barriers, reduce technical friction and create the highest-quality content each time

- Experience finite control and a more modular workflow with our node graph, so you can bring your creative vision to life
- Automate your more manual tasks with our robust APIs and efficient toolsets, so you can smash looming deadlines and focus on your artistry
- With Foundry tools, animation is easy. Artist can tackle any complex scene, texture or image resolution

Stay ahead of the industry curve

With the increasing demand for quality, it's important you have the right tools to create film-grade animation every time. Our tools keep up with the industry-standard for image processing and color and allow you to experiment with the latest trends, so you always have the tech you need to achieve your creative vision.

- Work with the industry-standard color workflows including OCIO and ACES
- Get access to USD-optimised tech, machine learning tools, Python and C++ APIs, support for popular commercial renderers and more
- Easily collaborate with the rest of your team and stay competitive knowing you're working on industrystandard software

Work smarter, not harder

Productivity is key to any animated productions, especially in the face of tight deadlines. Foundry's tools alleviate the laborious processes often faced on projects and give artists complete flexibility of their workflows so they can efficiently create animation with ease.

- Reduce the chaotic nature of editorial round-tripping and experience new levels of efficiency
- Work on a shot collaboratively and share settings across teams and sequences with Live Groups to a multiuser review
- Create and personalize any tools you need to produce amazing animated shots with heightened customization

Tackle industry challenges

- **Standardize your pipeline**
  Standardize your pipeline with tools that can be rolled out at a studio level, so you can keep your team organized and consistent, while you can be safe in the knowledge that everyone is working towards the same vision.
- **Collaborate efficiently**
  Work simultaneously on a shot with other artists, share work with your team and collaborate more effectively than ever, whether you're working remotely or in the same room.
- **Create custom tools**
  Experience high-level customization that can meld your workflows to meet your needs with Foundry tools. With open APIs, you have the freedom to create whatever custom tools you need to meet your deadlines and create the perfect shot.
- **Reduce manual tasks**
  Automate the more mundane tasks and save huge amounts of time, especially when facing tight deadlines. With this extra time, you can spend more time focusing on the creative side of things rather than boring manual tasks.

Visual Effect Solutions

Creating high-end visual effects is no easy feat. From episodic and movies to commercials and animation, VFX lives at the heart of all the content we watch. That's why Foundry is committed to offering VFX solutions for artists and studios, so they can tackle Oscar-worthy projects seamlessly. Our solutions give artists everything they need to excel in their VFX projects and create pixel-perfect content.

Our Solution

- **Compositing, Editorial and Review**
  The Nuke family comes together to make the ultimate Compositing, Editorial and Review solution. Nuke, NukeX, Nuke Studio, Hiero, HieroPlayer and Nuke Indie created an ecosystem of tools that seamlessly integrate into your pipeline so you can work efficiently from the start to the final delivery.

- **VFX Editing and Management**
  Foundry's VFX Editing and Management solution consists of Nuke Studio and Hiero and offers artists seamless review workflows, multi-shot management, editorial and conform, so your team can efficiently create highquality projects with ease.

Education Solutions

- **Students and Graduates**
  New to VFX and want to work on industry-standard technology to hone your skills? Check out our offerings for students and recent graduates, including free access for students in full-time education
- **Classrooms and Teachers**
  Explore our range of licenses for the classroom so you can teach your students how to refine their skills and get them ready to work in the VFX industry

Machine Learning.

Turn algorithms into art

Machine learning has the power to accelerate creativity and automate the mundane across visual effects, animation and beyond. Artists and studios can achieve results they couldn't before and get to the final creative faster by removing drudge work. Foundry's compositing tool Nuke has a full suite of tools to make machine learning accessible, empowering artist and algorithm to work in harmony.

Nuke's CopyCat: making machine learning accessible

We've implemented machine learning in a way that is aligned with the ethos of Nuke—that artists should have full technical and creative control over their shots. This is why we created CopyCat, an ML tool released in Nuke 13.0 that solves impossible problems while being entirely controlled by the artist. Tasks like deblur, rotoscoping, and beauty work that previously took days to work on can now be resolved in a matter of hours.

Machine learning for the masses: Inference & Nuke 13.1

Nuke's Inference node is used to apply CopyCat models to images in Nuke. Nuke 13.1 saw the functionality of this node extended via third party PyTorch model support, allowing users to bring their own machine learning models into Nuke, and run them performantly and reliably. This opens up Nuke to a broad range of community generated ML models.

Lighting & Look development.

Look development and lighting are essential parts of the animation and visual effects (VFX) production process. Foundry's own tools, Katana and Mari are made for artists so you can easily define the look of your characters, scenes and shots with texture and shading, and light with precision.

HEXAGON

Hexagon is a global leader in sensor, software and autonomous solutions. We are putting data to work to boost efficiency, productivity, and quality across industrial, manufacturing, infrastructure, safety, and mobility applications. It offers a unique combination of applications, fully integrated wireframe, surface and solid modelling, comprehensive 2D, 3D and 5 axis machining strategies with dedicated high speed routines. Industry specific applications for plastic injection tool design including material flow analysis and progressive die design with step-by-step unfolding provide the toolmaker with unsurpassed levels of productivity.

About Product

HEXAGON WORKNC
WORKNC CAM software is the premier automatic CNC software for surface or solid models in mold, die and tooling businesses for 2 to 5-axis CNC programming.

HEXAGON NCSIMUL
NCSIMUL is an all-in-one CNC software that manages the complete   machining process from the NC program to the part machined.

HEXAGON RADAN
RADAN is the total CAD CAM solution for cutting sheet metal. We   understand that metal is precious in your business and with our software, your company can significantly reduce inventory and increase material utilisation, allowing you to realise true return on your investment.

HEXAGON EDGECAM
EDGECAM is a market leading computer aided manufacturing (CAM) system for NC part programming.

Solution Portfolio

Autonomous Mobility Solutions
Hexagon's solutions for the autonomous mobility ecosystem are enabling the autonomous movement of people and goods.

Hexagon's solutions for the autonomous mobility ecosystem are solving one of the most promising and difficult technological challenges in history — the autonomous movement of people and goods. While most think of "autonomous mobility" as something that will drive our cars, driverless technology applications extend to forklifts in factories, tractors on farms, military tanks, mining trucks, heavy construction machinery, marine research vessels and more. Even supply-chain logistics will be transformed by autonomous long-haul freight trucking, railways and marine shipping. Hexagon's autonomous technologies underpin this ecosystem and are enabling the widespread deployment of autonomous mobility across a variety of industries and applications.

Building Technology Solutions
Hexagon supports the buildings ecosystem through a unique mix of sensor hardware and buildings-specific software.

The buildings ecosystem is the foundation of our global economies and is essential to our daily lives. Hexagon defines this vital ecosystem as the underpinning for the complete lifecycle of all vertical structures, which spans planning, design, construction, renovation, operations, maintenance and protection.

Cities and Nations Ecosystem
Beyond the smart city Putting data to work to solve challenges, from operational efficiency and service reliability to safety and sustainability.

Hexagon is uniquely positioned to help governments and essential service providers efficiently ensure public safety and administration; manage transportation, utilities and communication infrastructure; digitally map geography and physical property; and integrate   resiliency into industrial and commercial assets to ensure our cities and nations remain sustainable.

Defence technology solutions
We are committed to unleashing data to improve planting, cultivating, harvesting and delivering innovation in agriculture.

The farming ecosystem is arguably the world's most critical, not just in terms of its economic output, but also in its crucial role of providing our food supply in a sustainable manner. On this one ecosystem rests the responsibility to feed a rapidly growing population, sustain livestock, supply renewable fuel and industrial inputs — all while ensuring a healthier planet. Hexagon is committed to unleashing data to improve planting, cultivation and harvest, and delivering innovation to the OEMs (original equipment manufacturers) who support   agriculture.

Beyond Smart Farming
We are committed to unleashing data to improve planting, cultivating, harvesting and delivering innovation in agriculture.

The farming ecosystem is arguably the world's most critical, not just in terms of its economic output, but also in its crucial role of providing our food supply in a sustainable manner. On this one ecosystem rests the responsibility to feed a rapidly growing population, sustain livestock, supply renewable fuel and industrial inputs — all while ensuring a healthier planet. Hexagon is committed to unleashing data to improve planting, cultivation and harvest, and delivering innovation to the OEMs (original equipment manufacturers) who support agriculture.

Solutions for Industrial Facilities
Hexagon helps transform the entire lifecycle of the industrial facility ecosystem

Hexagon helps transform the entire lifecycle of the industrial facility ecosystem, empowering our customers to design, plan, build, operate and maintain these critical assets more efficiently, more profitably, more securely and more sustainably.

Beyond Smart Infrastructure
Hexagon's solutions for the infrastructure ecosystem enable speed, efficiency and productivity across a variety of projects.

The global infrastructure ecosystem — which includes roads, mass transit and power grids — is critical not only for meeting basic human needs, but also for supporting economic growth and maintaining quality of life. The world needs to increase infrastructure investment to €2.85 trillion per year through 2030 just to meet current growth projections, of which emerging economies will represent 60% of the growing investment needed.

Manufacturing Technology Solutions
Digitally transform the manufacturing ecosystem, from design and engineering to production, inspection and maintenance.

The discrete manufacturing ecosystem is vast, encompassing everything from design and engineering to the supply chain, from production and assembly to quality control, and distribution to end-of-life recycling. Hexagon provides manufacturing technology solutions to help digitally transform every phase of the manufacturing process.

Beyond Smart Mining
Comprehensive mining ecosystem solutions that enable scalable and sustainable operations.

The mining ecosystem is a major driver of the global economy, a focus of significant investment and a catalyst for growth across numerous industries. To supply the resources used across the world today and in the future, Hexagon's full mining lifecycle solutions — from planning, operations and safety to enterprise intelligence and reclamation — enable scalable and sustainable operations across this vast and critical ecosystem.

Kodak alaris

Kodak Alaris is unlocking the power of digital transformation in business and in life. We make businesses run faster, governments run smarter and give consumers what they want before they know they want it.

About Product

Kodak Alaris is a global technology company that's delivering future value through customer solutions. Our advanced, patented intellectual property combines breakthrough technologies, digital transformation and human know-how to unlock the power of images and information. We make businesses run faster, governments run smarter and provide consumers innovative solutions to preserve and enjoy their most cherished memories.

Services

Our Services are designed to solve business challenges with solution-based expertise. With a full suite of offerings, we keep you working at top efficiency and take disruptions out of your processes.

INfuse Solution

The INfuse Smart Connected Scanning Solution blends our expertise in capture with your specific application to create an automated solution.

Solution Portfolio

Document Scanners

From workgroup to high-volume production, Kodak Alaris has the ideal scanning solution. Reliable, high-quality and easy to use, these award winning scanners bring your documents into the digital era.

Software

Capture software helps you capture data from paper and digital sources, extract key information and deliver the right information to the right person or business system at the right time.

Award

LevelOne subjects all of our products under vigorous quality assurance and extensive product testing procedures to ensure that we comply with the stringent product quality standards set in Europe and the USA

About Product

LiveAction's Network Intelligence platform transforms complex data into actionable insights, providing organizations with a comprehensive view of their network, from network and application performance to security. Enterprise teams can rapidly take action to resolve network issues at scale, accelerate threat response, increase employee productivity, and reduce business risk.

Solution Portfolio

Managed WiFi Solutions

Managed WLANs from LevelOne a wireless network becomes even more advantageous. Instead of simply integrating laptops, smartphones or printers, our Managed WLANs help to boost business, provide more security and fulfill the desire for a mobile data network that adapts to own wishes.

Digital Signage Solutions

LevelOne digital signage solutions are the perfect setting for any content. At the POS, in hotels, at trade fair presentations or at outdoor events, our scalable systems are ideal platforms for connecting messages with target groups.

IP-Surveillance Solutions

Digital surveillance systems have been proven to increase security - and they do their job cheaper than CCTV. Other benefits of IP video surveillance include superior image resolution, better scalability and flexibility, enhanced video analytics, ease of use, and the ability to securely transfer video anywhere.

Power over Ethernet

Power over Ethernet, or PoE, is a technology which provides data and power to Ethernet-enabled local area networking (LAN) devices over existing wiring. This eliminates the need for a separate power supply. Ethernet-based LANs are standardised technologies defined by the Institute of Electrical and Electronics Engineers (IEEE) in Working Group 802.

LiveΛction
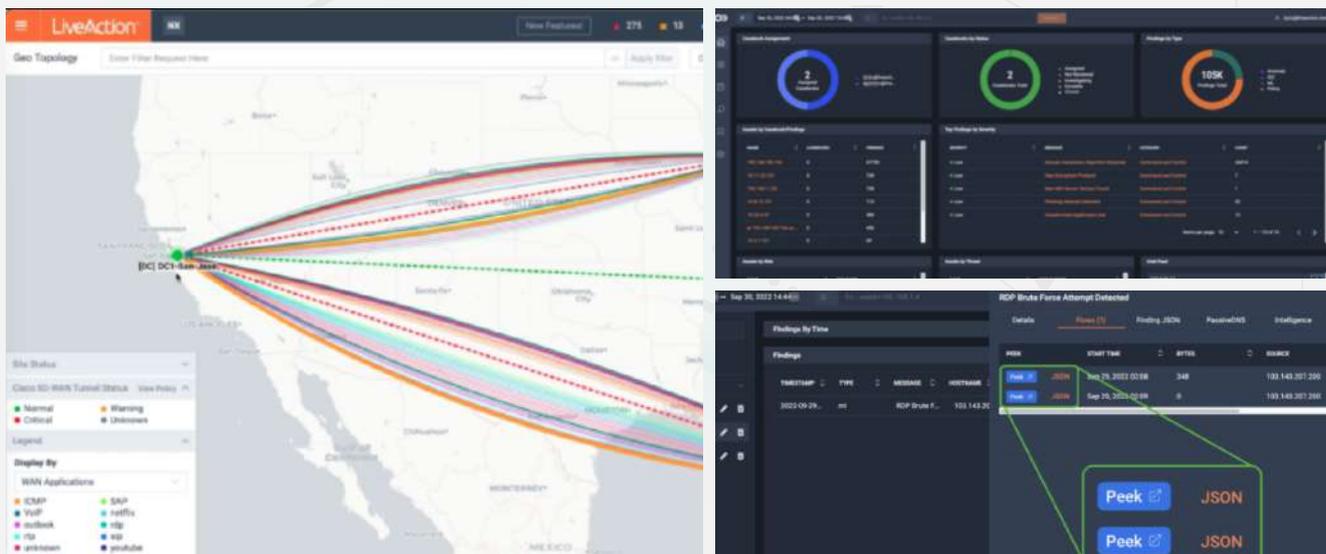

LiveAction is an award-winning software company designed to simplify real-time analytics, network, and application performance management.

About Product

LiveAction's Network Intelligence platform transforms complex data into actionable insights, providing organizations with a comprehensive view of their network, from network and application performance to security. Enterprise teams can rapidly take action to resolve network issues at scale, accelerate threat response, increase employee productivity, and reduce business risk.

Solution Portfolio

Network performance management in one platform.

End-to-end observability for network and application performance

Application performance monitoring is critical to running your business smoothly. LiveAction helps you proactively identify, troubleshoot, and resolve network and application performance issues regardless of where they occur to speed up time to repair, avoid costly downtime, and meet business needs.

Accelerate root-cause analysis and troubleshooting

Easily drill down from alert and context data to flow performance data, and further down to targeted packet-level forensics for a comprehensive trouble-resolution workflow. Optimize network performance, reduce latency and jitter, and slash MTTR by diagnosing and resolving the underlying root cause of issues quickly and efficiently.

Gain confidence with data-driven change initiatives

With LiveAction, network teams identify pilot sites, baseline current network performance, and monitor ongoing performance for deviations caused by new technologies like SD-WAN or cloud. Post-rollout, LiveAction monitors operations to ensure the network continues to meet cost and performance needs.

Manage cost and ensure network performance

Analyzing disparate network data can quickly become costly and time-consuming for NetOps. Without the right information, you may over or under invest in capacity and hardware to deliver a high-availability network. With LiveAction, you can share comprehensive views of what's happening in the network, including performance, capacity, and utilization.

Manage cost and ensure network performance

Analyzing disparate network data can quickly become costly and time-consuming for NetOps. Without the right information, you may over or under invest in capacity and hardware to deliver a high-availability network. With LiveAction, you can share comprehensive views of what's happening in the network, including performance, capacity, and utilization.

Network Security (NDR)

Eliminate network blind spots

Decrypting network traffic is challenging to manage, expensive to operate, and kills network performance. ThreatEye combats cyber-attacks by applying machine learning to Deep Packet Dynamics (DPD) without decryption. This approach eliminates encryption blindness while significantly reducing operational costs and complexity. Additionally, ML-driven device discovery allows enterprises to identify IoT and rogue devices that may be compromised.

Spend less time detecting threats

ThreatEye monitors internet-facing infrastructure by mapping malicious groups, traffic, and activity upon activation. Using this data and a multi-stage analysis pipeline, ThreatEye provides your SOC team with a cohesive data story (geography, passive DNS, MITRE ATT&CK techniques, threat intelligence, risk scores) to reduce ransomware impact by resolving incidents faster.

Empower efficient and effective SecOps

ThreatEye's workflows and casebooks enhance SOC analyst workflows by integrating data enrichment and packet analysis into a single interface. ThreatEye enables team collaboration using casebooks that support analyst workflow stages and event tagging. This integrated approach enriches, collaborates, and alerts, reducing investigation costs and overall MTTR.

Seamlessly integrate with existing security tools

By integrating with your existing security tools, ThreatEye enhances your security defense toolset without creating more disparate environments, making it easy to streamline your security operations and get a comprehensive view of your security posture.

Lookout
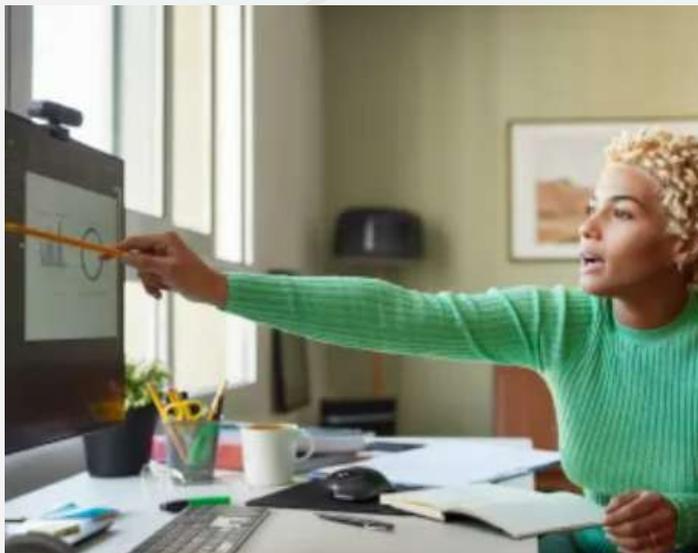

Combine Your SWG, CASB, FWaaS, & ZTNA into a Single Unified Architecture with Lookout SASE. Secure Your Remote Workforce: Protect Users, Apps & Data Against Web Threats. Learn More. Prepared for Ransomware? Mitigate Ransomware Risk.

About Product

Data security is not just about locking down sensitive information. It's about setting it free. From device and app to network and cloud, we're unifying data security for businesses and individuals - providing protection from anywhere, on any device, without sacrificing privacy. It's the future of secure data and peace of mind for all.

Solution Portfolio

Mobile Endpoint Security

Many organizations are now embracing the use of smartphones and tablets to increase productivity in the workplace, and as more sensitive data goes mobile, your organization's security policies must extend to your mobile endpoint devices. Lookout Mobile Endpoint Security makes it easy to get visibility into the entire spectrum of mobile risk, apply policies to measurably reduce that risk, and integrate into your existing security and mobile management solutions.

Phishing and Content Protection

It only takes one errant tap to compromise a mobile device. That tap may be on a malicious URL that was truncated in the browser window, a URL an app accessed in its backend to unknowingly connect to a malicious ad network, or a link in personal email created to trick a user into offering corporate credentials—that enables an attacker to move laterally in your infrastructure towards your valuable data. The Lookout artificial intelligence detection engine proactively determines the reputation of sites on the Internet. With an always-on approach, Lookout Phishing AI detects phishing kits as they are being built, before any user is targeted and an attack is executed.

Lookout for Small Business

Lookout for Small Business makes it easy for your customers to secure their mobile devices with predefined protection settings, a simple three click deployment process, and on-device remediation guidance for users. Now you can give your small business customers visibility, protection and control for mobile employees connecting to the latest cloud productivity services.

App Defense

Apps have won on mobile. Smartphone apps now represent 60% of all time spent online. However, while mobile apps bring new conveniences, such as mobile banking, they also introduce new risks in the form of mobile security threats such as trojans that steal login credentials, and jailbroken/rooted devices that leave your apps vulnerable to data compromise. Leveraging the world's largest mobile data set from of over 170 million mobile devices worldwide, Lookout can detect security threats and risks such as a breach of customer data, and take action by blocking access before customer data is compromised.

Lookout Personal

Lookout Personal is the only solution that provides mobile security, identity protection and theft prevention in a single app. Tens of millions of individuals who use their phones for everything and are concerned about the security and privacy of their personal information have turned to Lookout for a simple and straightforward way to help protect their devices and their personal data. Get Lookout Personal today for all-in-one mobile security and identity theft protection.

Malwarebytes
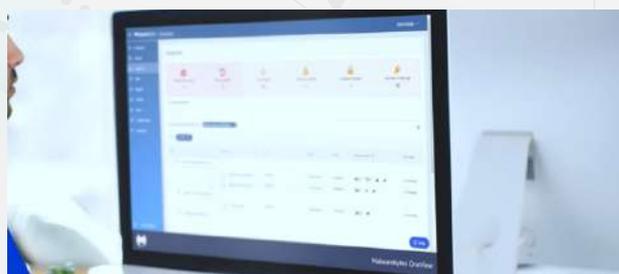

Malwarebytes protects your home devices and your business endpoints against malware, ransomware, malicious websites, and other advanced online threats.

About Product

Here at Malwarebytes, we believe that when you're free from threats, you're free to thrive. It all started with one person who needed help with a malware infection, and a community coming together to find solutions. In that moment in time a product was born for all people, with a mission to rid the world of malware.

Our product has since grown and evolved. From removing malware, to protecting devices, to ever-changing prevention.

Solution Portfolio

Malwarebytes Incident Response

Malwarebytes Incident Response is a threat detection and remediation tool built on a highly scalable, cloud-based management platform. It scans networked endpoints for advanced threats including malware, PUPs, and adware and thoroughly removes them. Malwarebytes Incident Response improves your threat detection and the time it takes to respond to an attack with the added benefits of scalability, flexibility, and automation.

Malwarebytes Endpoint Protection & Response

Malwarebytes Endpoint Protection & Response integrates Multi-Vector Protection with detection and response capabilities via a single agent. It provides visibility, reduces dwell-time of zero-day threats, and offers remediation options beyond alerts. Endpoint Protection & Response eliminates EDR complexity with intuitive endpoint monitoring, detection, and remediation.

Malwarebytes Premium

Malwarebytes for Windows Premium is a comprehensive cybersecurity program that crushes established and emerging threats before they can disrupt your digital lifestyle. So you can play, shop, and socialize online with peace of mind.

Malwarebytes EndPoint Security

The right approach to securing the endpoint requires Malwarebytes Multi-Vector Protection. Multi-Vector Protection employs multiple layers of technology to address advanced threats that leverage different attack vectors and techniques. Defend your endpoints against all types of threats with a layered approach that leverages static and dynamic detection technologies to address every stage of an attack for both Windows and Mac.

### Malwarebytes ANTI-EXPLOIT for Business

Malwarebytes Anti-Exploit for Business protects in both stages of an exploit attack using multiple layers of innovative technology.

Award

Matterport is the leading spatial data company focused on digitizing and indexing the built world. Our all-in-one 3D data platform enables anyone to turn a space into an accurate and immersive digital twin which can be used to design, build, operate, promote, and understand any space.

About Product

Matterport Axis

Axis is Matterport's Capture Assist Motor Mount, a companion device for smartphone capture (SPC). It simplifies the capture process and further enhances the quality and fidelity of scans captured by SPC.

Pro2 3D Camera

The Pro2 is the gold standard for 3D capture. It's perfect for everything from simple residential properties to large, complex commercial spaces. No camera combines detail and speed like the Pro2, while also delivering precise dimensional accuracy and 4K print-ready image quality.

Matterport Capture for Mobile (SaaS)

Matterport for Mobile puts the future of buildings at your finger-tips. Capture any space, create a digital twin, share it on social media...the possibilities are endless. Now available on any device.

Solution Portfolio

3D Real Estate

Whether you're a real estate agent, a broker, or a property manager, Matterport's 3D virtual tours can increase commissions, reach a wider audience, and close on properties faster.

3D Photography

Set yourself apart from the competition. The Matterport capture platform lets you create 3D digital twins of any physical space, helping you capture new clients and grow your business.

Transform Retail Experiences in 3D

Capturing immersive 3D models of in-store layouts and displays enables retailers to quickly and easily plan, implement, and manage brand, floor layouts, and merchandising across locations.

3D for Travel & Hospitality

From vacation rentals, to hotels and event spaces, you can elevate the promotion of your business with 3D tours that increase bookings, drive higher occupancy rates, and increase engagement rates.

Homeowners

3D scanning is not just for the pros. Many homeowners and renters want to create immersive digital twins of their homes to help them with design and improvement projects, document their possessions for insurance, preserve memories, or just to share. Matterport for Mobile offers the simplest and most affordable solution for building 3D virtual tours.

3D Scanning for Insurance and Restoration

Whether you're an insurance carrier, a claims adjuster, restoration company, or property owner, Matterport delivers accurate, transpa-rent, and fair documentation and valuations. Save time, cut costs, and close claims much faster.

Facilities Management

Matterport is the most efficient, effective method to survey your existing buildings and report on the building layouts and conditions to manage maintenance and develop remodeling plans

Matterport for Government

Matterport's groundbreaking 3D capture technology is now available to public sector agencies, NGOs, and federally-regulated industries. With Matterport for Government, you can use any compatible camera — including your smartphone, photo-realistic, dimensionally-accurate 3D models, hosted in a Federa-lly-compliant cloud.

3D for Architecture, Engineering & Construction

Whether you work in architecture, engineering, or construction, you'll be able to streamline documentation, 3D scan as-builts, and collaborate with ease. With Matterport, you can also reduce costs and help save the most precious commodity — your time.
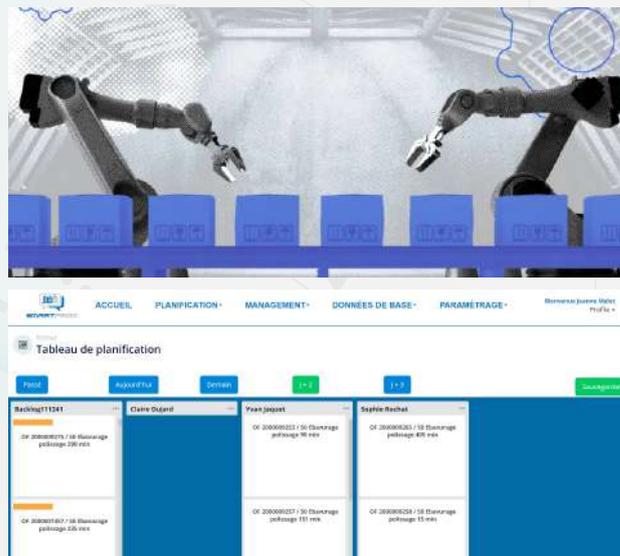

Mendix is the fastest & easiest low-code platform used by businesses to develop mobile & web apps at scale. Visit to learn more & try the platform for free!

About Product

Mendix is a high productivity app platform that enables you to build and continuously improve mobile and web applications at scale. The Mendix Platform is designed to accelerate enterprise app delivery across your entire application development lifecycle, from ideation to deployment and operations.

Mendix enables you to implement both Agile and DevOps best practices. It even goes beyond that by involving business stakeholders in the actual development of the applications.

Solution Portfolio

Industry Solutions

Unlock your potential with the Mendix Cloud

• Financial Services
Mendix for Financial Services is an essential destination for organizations looking to set the benchmark for operational excellence, as well as customer and employee experiences. Here, you'll have access to industry-focused best practices and the people who create them.

• Insurance
High performance Mobile Solutions require an end-to-end solution with an interface across multiple fronthaul and backhaul technologies by having flexibility to accommodate the unique needs of cell site, whether in small cells or macro cells.

• Manufacturing
Mendix gives you the platform to assemble the right business experience across domains, keeping your digital thread unbroken from strategy to planning to design to manufacturing.

• Retail
Competitive pressures in retail are at an all-time high and require exceptional customer experiences at every touchpoint.

• Public Sector
Mendix brings forward-thinking technology to the public sector to help governments, municipal authorities, universities, and other organizations drive digital transformation in a swiftly evolving world.

• Energy and Utilities
Energy sources are shifting, the regulatory landscape is getting more complex, and customers are expecting more personalized products.

• Logistics
Operational efficiency starts with digitizing analog processes, unifying incongruent legacy systems, and aggregating your data, all of which can be done with low-code applications.

• Public Transport
Public transport authorities are under pressure to improve the way public transport is used and managed. This industry suffered a dramatic decrease in passenger numbers during the pandemic and there is a need to restore public faith in post-pandemic recovery of the industry.

• Government
Mendix helps government organizations meet people where they are and adapt to the evolving needs of your partners, citizens, and employees.

• Aerospace and Defense
Technology is making the industry accessible to new players, placing increased pressure on incumbents to revolutionize their R&D practices. Established providers need to invest in order to differentiate themselves.

• Automotive Transportation
With Mendix, you can drive agility in your business and achieve a new level of efficiency. Create new high-speed ways to engage internal stakeholders and customers with digital services by collaboratively building cloud-native

• Industrial Machinery
The Mendix low-code application development platform perfects industrial machinery innovation by extending the digital thread to every participant in the value chain.

• Consumer Packaged Goods
Mendix is creating new ways to engage the market by extending the digital thread from product innovation to the consumer. As that digital thread draws out unique needs and consumer preferences, Mendix weaves that intelligence back to the integrated product lifecycle processes that make those ideas a reality.

• Electronics
The Mendix low-code development platform helps manufacturers develop electronics applications for more connected digital experiences — from the small supplier to the global OEM, the top floor to the shop floor, and from supply to consumer.

• Life Sciences
Mendix empowers life science companies to bring composability into the enterprise app strategy DNA to deliver automated, cross-domain collaboration

Initiative

From automating manual processes to rebuilding core legacy systems, organizations across every industry are using low-code to build value-driven business solutions with less coding,

• Customer experience
Customer experiences built with low-code have the advantage of exceptional UI tools, the ability to integrate with your existing systems, and the potential to improve customer satisfaction, retention, and revenue

• Digital Transformation
Whether it's digitalizing internal operations or developing new digital business models, digital transformation with low-code is flexible, versatile, and streamlined.

• Legacy Modernization
Legacy systems are notorious for high operating and maintenance costs and low flexibility. Outdated systems come with limitations that can hinder an enterprise's ability to deliver modern, agile solutions.

• Process Automation
Process automation apps help lower costs and save time by either reducing or eliminating an organization's reliance on manual and paper-based processes

• Smart Manufacturing
Building on the promises of Industry 4.0 and the Internet of Things, smart manufacturing technologies seek to create smart factories equipped with hyperflexible, self-adapting capabilities.

Needs

High performance Mobile Solutions require an end-to-end solution with an interface across multiple fronthaul and backhaul technologies by having flexibility to accommodate the unique needs of cell site, whether in small cells or macro cells.

• Field Service Management
Mendix Maintenance is an adaptive app suite which consists of templates providing you with a kickstart to shorten time to value.

• Time & Project Management
Forget your spreadsheets and try The Teamer to monitor your project's burn rate. Plan your resources effectively based on real time working hours. Finally, a smart and simple HRIS: Time tracking, resource scheduling and project budget management.

• E-Commerce & Fulfillment
Deliver a seamless customer experience across selling and fulfillment channels by managing orders, customers, and inventory in one place

• Fashion & Retail Development
Visually interactive solution using a digital twin and True 3D integration to accelerate your development process from concept to commerce.

• Manufacturing Shop Floor
Reimagining the Manufacturing Shop Floor Bring speed and agility to your shop floor processes with Mendix low-code applications

• Quality Management
Keep your quality management processes simple and dependable with a low-code platform

Transformation

The DZS Velocity Broadband Connectivity Portfolio is a unified class of products that provides carriers with unrivaled flexibility and agility in leaping to the latest fiber access technologies and SDN-enhanced operational models.

• Mobile Self Service
Rabobank IDB Delivers Web and Native Mobile Banking Experiences.
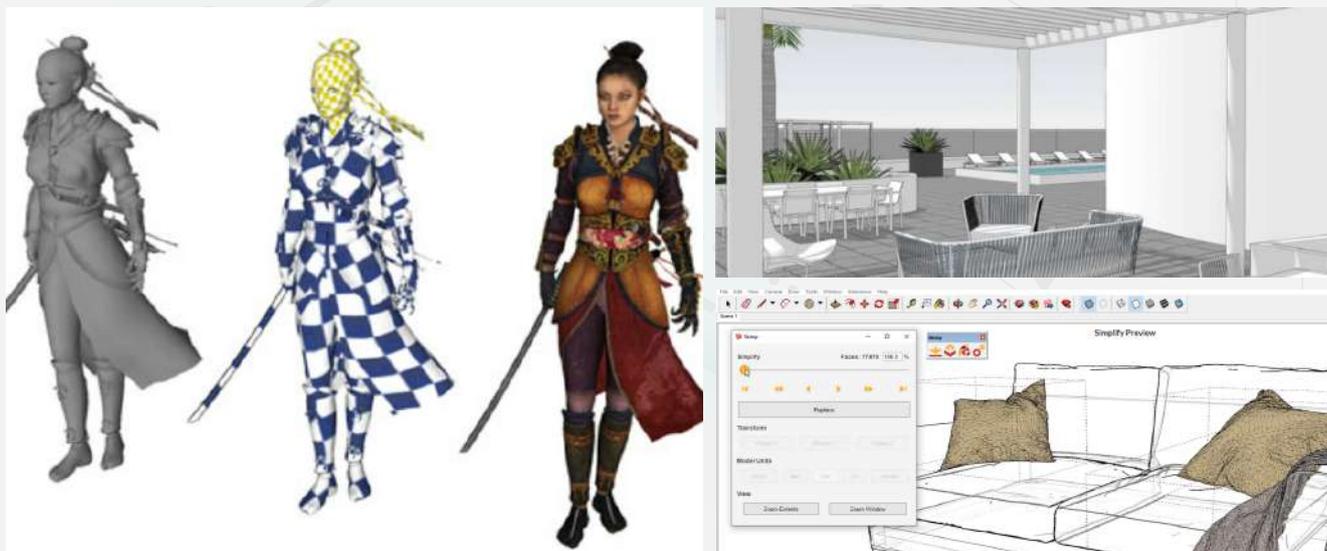

• Wrap and Renew
BDC Accelerates Loan Processing to Support Entrepreneurs

• Digitalization
Crafting Digital Manufacturing Processes at Speed with Kaneka Malaysia

mind.sight.studios

We are the creators of popular SketchUp extensions including Profile Builder, PlaceMaker, Quantifier Pro,and Artisan Organic Toolset. Extensions (a.k.a plugins) are the key to supercharge your productivity and take you from SketchUp newbie to ninja.

About Product

Our plugins are being used by thousands of SketchUp professionals worldwide to provide solutions for BIM, cost estimating, quantity takeoff, organic modeling, urban context modeling, polygon reduction, and overall increased 3D modeling productivity.

Solution Portfolio

SketchPlus

Add the Missing Tools to SketchUp Pro! SketchPlus is new extension for SketchUp that adds more than 30 easy-to-use tools, many of which are commonly found in other 3D modeling applications such as selection filtering, selection memory, mirror, and align. Designed to work together in a simple and intuitive SketchUp-like user experience, these tools will seamlessly integrate into any existing workflow and you'll soon wonder how you ever used SketchUp without them!

Skimp

Finally! Pain-free FAST import and simplification of high-poly models into SketchUp! Supports FBX, OBJ, STL, DAE, and more. Skimp is a new professional import extension designed to make it fast and easy to import high-fidelity models into SketchUp!

PlaceMaker

Stop wasting your project budget on creating site context. PlaceMaker automates the creation of your site model with a simple mouse stroke!

Profile Builder

Lightspeed modeling of smart building materials

Quantifier Pro

Quantifier Pro is compatible with both Windows and Mac using SketchUp 2017 or newer. Click below to order a free trial or permanent license

Artisan Organic Toolset

Subdivision, sculpting, and soft selection tools for artists, designers and landscape architects.

BoolTools 2

Powerful boolean operations for SketchUp Make or Pro. Guaranteed BETTER RESULTS than the SketchUp Solid Tools or it's FREE!

Double-Cut

Make SketchUp cutting components (windows, doors) automatically cut through thick walls! Not only that, if you move the component after inserting it, the double-cut will automatically be updated, saving you valuable time.

DECAsteel

DECAsteel™ (in development) will transform the workflow of structural engineers, steel designers, and detailers. Anyone who has ever had to design or model steel structures in 3D can benefit from the tools provided inside this application.

NSFOCUS
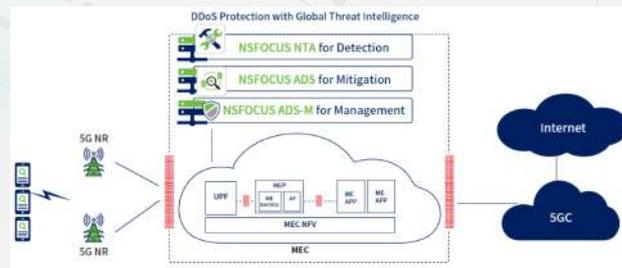

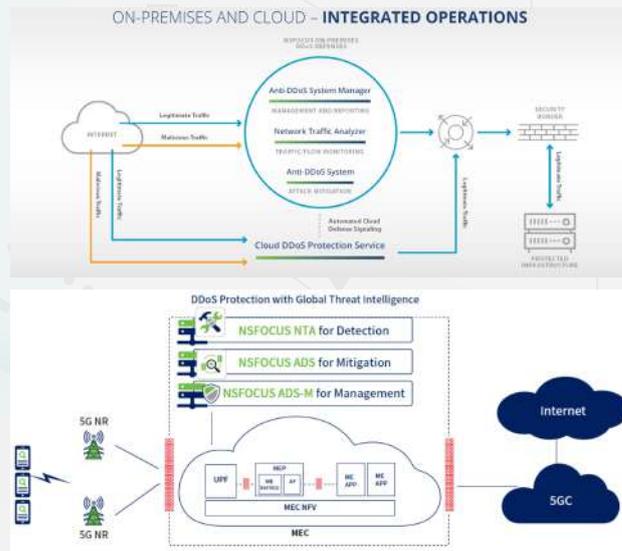

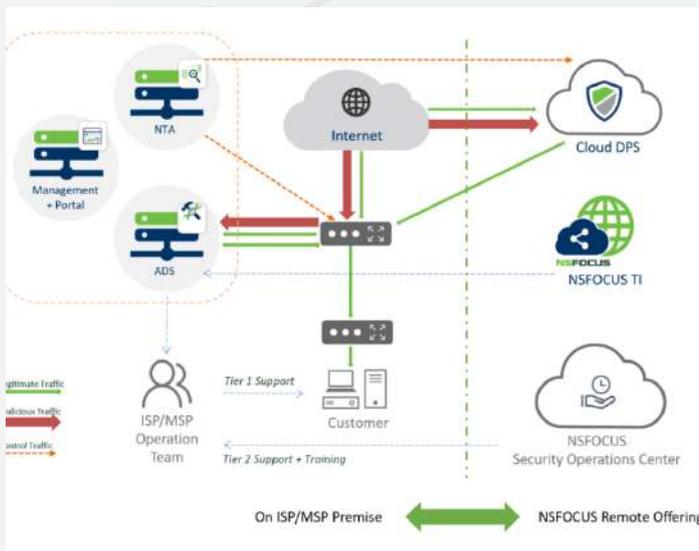

NSFOCUS is an iconic network and cyber security provider for telecom carriers, BFSI, enterprises, healthcare, retail and SMBs. It has a proven track record of protecting over 25% of the Fortune Global 500 companies, including four of the five largest banks and six of the world's top ten telecommunications companies.

About Product

NSFOCUS provides a turnkey solution for organizations with a suite of Cloud Security Services: WebSafe, Cloud Web Application and API Protection Service, Cloud DDoS Protection Service and SASE.

Solution Portfolio

Cloud-in-a-Box

A revolutionary way for local and regional service providers to offer Cloud Security Services

On-Premises DDoS Defenses

Enables Service Providers to defeat attacks impacting their customers, using NSFOCUS On-Premises Defenses

Hybrid DDoS Defenses

Combines on-premises defenses with cloud defenses, while enabling providers to deliver Managed DDoS Services with a multi-tenant Platform that produces the lowest operating costs in the industry

Value-Added Service

Service Providers could launch its DDoS mitigation service as an add-up to its network services

5G Network Security

Build Resilient Security Over Your 5G Networks to Protect Against Threats Both Predictable and Unpredictable

ptc

Packed with performance and usability improvements. To help you deliver the best designs in the shortest time. There are also new tools for manipulating, editing and viewing CAD models, and Creo 9 continues to improve tools for ergonomic design, data entry (MBD), model making. simulations, AI design and CAM tools.

About Product

Disruption is happening everywhere—from supply chain issues to workforce attrition to your competitors taking market share. PTC helps companies thrive in these conditions by giving them the "Power To Create" more innovative products, solutions, and workforces.

Creo
Creo is the 3D CAD solution that helps you accelerate product innovation so you can build better products faster

Approachable & Responsive
Bricscad offers 24-hour turn-around customers' support requests. Bricscad also offers article, tutorial, e-books and guides which you can download, for free

Kepware
Kepware is a portfolio of industrial connectivity solutions that help businesses connect diverse automation devices and software applications.

ThingWorx
Remove your barriers to digital transformation with ThingWorx, the IIoT platform purpose-built to address your business challenges.

Vuforia
Vuforia is a comprehensive, scalable enterprise AR platform. Our wide-ranging solution suite ensures that we can provide the right AR technology to every customer based on their business needs.

Windchill
Realize value quickly with standardized, out-of-the-box functionality across a comprehensive portfolio of core PDM and advanced PLM applications.

Solution Portfolio

Digital Engineering Solutions :
- Computer-Aided Design
- Design and develop products with software for parametric modeling, simulation/analysis, and product documentation.

Product Lifecycle Management
Collaborate across disciplines, projects, and divisions by leveraging an authoritative source of truth for all product-related data.

Digital Manufacturing Solutions
- Build a better IIoT solution with ThingWorx
- Industrial companies face pressing challenges that require IIoT solutions. To address a wide range of manufacturing, service, and engineering use cases, PTC has spent years innovating the ThingWorx IIoT platform.

Vuforia: Market-Leading Enterprise AR
Vuforia is a comprehensive, scalable enterprise AR platform. Our wide-ranging solution suite ensures that we can provide the right AR technology to every customer based on their business needs.

Closed-loop Problem Solving Is Best in Class
Transform your data from high level and lagging to precise and real-time and value creation from diffuse and incremental to prioritized and double digit.

Industrial 3D Printing for Flexible Manufacturing

About Product

At Raise3D, our focus is to inspire industry-level change by designing and building 3D printers that extend the limits of what is possible for designers and manufacturers.

Raise3D products are being used in a wide variety of fields including architecture, medical, dental, product design, manufacturing, education, costuming, model making, props, and more. With offices worldwide and experiencing 400% year-to-year growth, Raise3D is rapidly expanding and has become one of the fastest growing 3D Printing companies on earth

Solution Portfolio

Manufacturing & Engineering

Find Industrial 3D Printer for Manufacturing

Raise3D's technology is developed with the proven quality and the necessary capabilities to fit into the manufacturing sector. Vast industries, including automotive, machining and electronics, can rely on Raise3D products for flexible manufacturing, applicable to many aspects of product development, on the production floor and in after-sales service.

Design, Education & Consultancy

An Easy and Reliable Printing Experience

Common Applications: Props, Architectural Models, Miniatures, Art Reproductions and Teaching Aids.

Medical

Cost-effective Tools for Advanced Product Customization

Proven Applications in Prosthetics, Orthopedic Insoles, Dental Models Anatomical Models, Surgical Guide Prototypes, Radiology Boluses and more.

Resurface

Captures API details to immediately identify valid traffic from malicious actions, adding active API intelligence to your security stack.

About Product

An API-centric world needs better security solutions. APIs transformed the digital world. The tools to manage and secure these APIs haven't kept pace. It's time for a new approach.

Every public-facing computer system is under constant attack 24/7. But often, the decision to capture API traffic is laden with cost concerns. So it doesn't happen. API traffic goes unchecked and unmonitored, violating OWASP security guidance. Attackers thrive where tradeoffs between security and performance or cost are made. We're solving for API security at runtime where perimeter security simply isn't enough. Not anymore.

Unfortunately, the tools and processes that protected us in the past don't provide the same level of security confidence we need now. Anymore, public APIs serve our needs, while offering an attractive (and lucrative) attack surface for bad actors. So the very things we rely upon for growth and innovation can be used to kill our business.

We're not here to fear-monger, but we need to shake up the status quo. That means providing visibility into the black boxes that can be APIs, into the traffic they carry, and into what in that traffic can harm us. At Resurface, we are dedicated to API security through visibility, detection, and fast response.

Solution Portfolio

API capture via network, API gateways, or in-application

Capture API traffic via networks, API gateways or via applications. Or in any combination. Resurface allows you to choose the best path for your implementation.

Real-time actionable data

Resurface runs in production, continuously scanning all API traffic to detect attacks, threats, and leaks. Alerts via Slack, Teams, Gchat, and Zapier-connected tools contain complete, sequenced datasets for fast response and remediation.

REST and GraphQL API traffic

Resurface understands both REST and GraphQL API data, with all request and response details. Out-of-the-box signatures detect and classify GraphQL (including batched GraphQL) queries, mutations, and subscriptions for fast parsing.

Mapped to OWASP security rules

Resurface uses the OWASP core rule set and other security rules across both request and response data to detect active attacks and risk to production APIs.

SQL-based queries

Because Resurface is standards-based using open SQL, you can search for, find, and aggregate specific header values. You have full control over columns & aggregation functions. The Resurface UI is the easy path, but doesn't hold you back in accessing any API data to meet specific requirements.

Query-optimized database

Based on Trino, Resurface is a query-first database, with views that constrain all columns at once, executing at memory-speed. Unlike upfront modeling required by other solutions, you don't have to know what you're looking for beforehand. Out-of-the-box signatures reduce the noise, and one-click custom signatures allow you to create your own persistent searches. (Poke around our SQL reference.)

Native privacy and security rules

Private/self-hosted, native privacy controls protect PII throughout capture, transit and at-rest.

Ruijie Networks is a leading ICT company, headquartered in China. It has been committed to providing innovative scenario-based network products

About Product

Since founded in 2003, Ruijie has been building in-depth scenario-oriented application experience through solution design and innovation in the industry, thus assisting the upgrade into the digitalization of all industries. Ruijie dedicates in the R&D, design, and sale of network devices, network security products, and cloud desktop solutions.

Solution Portfolio

Enterprise Solution

Education

Ruijie Networks delves into education user scenarios for solution design and innovation, leveraging various emerging technologies such as cloud computing, big data, Internet of Things (IoT), and mobile Internet to provide university customers with end-to-end full-scenario smart campus solutions. For more than 20 years, Ruijie has served over 2,600 colleges and universities and stayed committed to reshaping your campus network experience.

• **Digital Campus**
Ruijie can provide full-scenario wireless coverage on campus, delivering superior user experience through ubiquitous access and building a scalable and robust network for the future.

• **Smart Campus**
We offer hybrid/multimedia learning, AR/VR, AI, IoT, campus applications, and cloud services to enhance the learning experience. Our solutions also provide simplified and automated operation, efficient management, and ultra-high security.

• **Teaching Informationization**
We will provide smart campus digital products, next-generation smart classrooms, and other innovative solutions for demonstration applications. We are committed to advancing the digital information construction of colleges and universities by leveraging our R&D capabilities including digital technology research, educational training, and application product development.

• **Reconstructing the Smart Campus Framework**
-**Full Connections**
Full-scenario wireless coverage Seamless roaming and ubiquitous access
-**Scalable and Robust Network**
Simplified, solid, and green network architecture Future-proof network foundation
-**Smart Education**
Hybrid/Multimedia learning, AR/VR, AI, and IoT, Campus applications and cloud services
-**Simplified Operation**
Automated operation, Efficient management, High security

Enterprise

Ruijie Networks excels in delivering cutting-edge network solutions tailored for the electronics, automotive, pharmaceuticals, and steel manufacturing industries. Our comprehensive network services cater to diverse applications including mobile office, safety production, intelligent warehousing, and logistics. We are committed to empowering the digital revolution toward intelligent manufacturing. Ruijie Networks achieves a compound annual growth rate of over 60% in the manufacturing industry market. We proudly serve tens of thousands of enterprise customers, including over 300 top-500 Chinese enterprises. As Internet of Things (IoT) technology advances, the industrial Internet is revolutionizing industrial production through digitalization, networking, and automation. This transformation provides extensive digitalization support to enterprises.

• **Intelligent Manufacturing**
-The industrial Internet enables enterprises to automate and streamline their production processes, improving efficiency and product quality.
-Intelligent manufacturing will become the mainstream mode of future industrial production, offering enterprises a significant competitive edge

• **Data as Driving Force**
-The industrial Internet will facilitate the acquisition, analysis, and utilization of various production data, enabling optimization and fine-grained management of production processes.
-By harnessing the power of data, enterprises can gain a deeper understanding of market demands and maintain a competitive edge with optimized production plans and enhanced product quality.

Manufacturing

By adopting advanced wireless technologies, Ruijie Networks builds a stable, continuous, agile, and intelligent wireless network for the enterprise manufacturing scenario. This lays a solid foundation for future smart factories to move towards fully interconnected flexible production.

Have You Encountered the Following Problems in Your Smart Factory?
• AGV breakdown upon movement
• Service interruption caused by AP failures
• Unreliable connections between headquarters and branches
• Difficulties in collecting production data through wired networks during production line adjustments
• Inefficient O&M and management

SANGFOR

A Leading Cyber Security, Cloud and Infrastructure Vendor · Sangfor Makes Your Digital Transformation Simpler and Secure

About Product

Sangfor Technologies is a leading global vendor of IT infrastructure solutions, specializing in Cloud Computing & Network Security with a wide range of products & services including Hyper-Converged Infrastructure, Virtual Desktop Infrastructure, Next-Generation Firewall, Internet Access Management, Endpoint Protection, Ransomware Protection, Managed Detection and Response, WAN Optimization, SD-WAN, and many others.

Solution Portfolio

Sangfor Makes Your Digital
Transformation Simpler and Secure

Your Pathway to Digital Transformation

Intelligence-driven Products

Access our latest products & technologies to propel you towards digital transformation.

Tried & Tested Solutions

Leverage our extensive range of solutions to address your most critical business needs.

Best-in-class Service

Our range of supportive services are tailored to help you achieve your business goals.

Products

Most Powerful, Versatile, and Effective Cyber Security Products

Cyber Command-NDR Platform

Intelligent Threat Hunting and Response Cyber Command is an intelligent threat detection and response platform that significantly improves security detection, network threat detection, threat hunting and response capabilities.

Internet Access Gateway (IAG)

Accelerating modern trends such as cloud applications adoption, the move of the hybrid workplace and increased use of mobile and personal devices for work have all constantly put more pressure on the organization to ensure a secure workforce environment

Platform-X

Sangfor Platform-X is a state-of-the-art cloud-based security operations center that consolidates security device management and security analysis into a unified interface.

Endpoint Secure

Sangfor Endpoint Secure utilizes a different approach to defending systems from malware and APT threats compared to current next-generation Anti-virus (NGAV) or endpoint detection & response (EDR) solutions

NGAF-Next Generatiion FIrewall (NGFW)

Sangfor's Next Generation Firewall (NGFW) is a network firewall security device designed to filter and inspect network and application traffic for threats

SASE Access

Unified management of enterprise headquarters, branches and mobile office through cloud-based service platform.

Sangfor SSL VPN

The Sangfor SSL VPN Solution provides support for remote user access to the enterprise network from anywhere Internet-enabled location. Remote access is provided through a Secure Socket Layer (SSL) enabled by an SSL VPN gateway.

EasyConnect

Sangfor EasyConnect is a fast, simple and safe remote access solution allowing access to Windows desktops and applications independently of the machine they're installed on, from any device and with any operating system.

Solutions

Industry Wise Solutions and Top Use Cases

Secure Internet Access

Secure Internet Access (SIA) is a comprehensive security solution delivered from Sangfor IAG to empower any organization to easily safeguard user internet access behavior without compromising performance and inefficiency.

Anti-Ransomware

Anti-ransomware tools, ransomware prevention solutions, and cybersecurity services are high in demand as governments and companies are determined to extinguish any further threats and attacks without suffering any financial losses or losing pivotal information and data

Application Containment

Sangfor XDDR takes application control to the next level with Application Containment by integrating and correlating endpoint, container, or workload application behavior with their behavior on the network

Continuous Threat Detection

Studies show most threat detection services organizations' have in place are unable to prevent 50% of the new malwares.
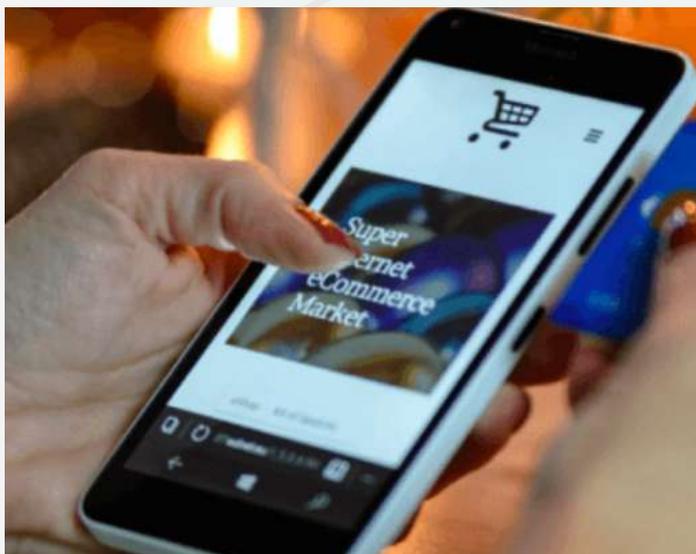

XDDR

XDDR directly integrates Sangfor and certain third party products together, allowing them to directly communicate with each other, extending and overlapping their spheres of influence.

"Visionary" Vendor

Gartner Report on Cloud Strategy

Gartner Whitepaper on NDR

The Security expert with over a Decade in Providing the safest, most reliable and highly trusted mobila application security solutions for brands across asia.

About Product

SecIron is founded in 2010 by a team of specialist and experts in the field of Mobile Application Security across Asia. We are committed to creating a secured mobile future through innovation and development of Mobile Application Security technologies in safeguarding business and communities from cybercriminals and mobile threats.

From our research & development center headquartered in Tokyo, Japan, our specialists continuously develop future-proof mobile application security solutions that are easy to implement through a code-less holistic approach, making mobile threats a thing of the past.

Solution Portfolio

Financial Industry

The only data-aware threat detection and incident response solution. The ultimate goal of every threat hunter and incident responder is to safeguard sensitive data from external attackers. Digital Guardian offers the only solution that provides full data visibility in addition to detection and response capabilities, all from the same cloud-delivered console

Retail & E-Commerce

With mobile commerce being the preferred choice across users globally and with the recent digitalization growth since 2020, the need for a dedicated mobile app security solution to prevent cyber attacks should be considered highly. By implementing high-end mobile app security, businesses can efficiently protect the data at rest and in motion that have been entrusted to them by their customers.

IoT Industry

IoT interoperability between apps and devices are one of the most vulnerable to cybersecurity threats. As businesses look to adopt the latest IoT technology into their product offerings and operations, they must become aware of the unique security challenges that come with it. By deploying dedicated application security solutions, businesses in the IoT industry stand to benefit greatly from mobile application security. Mobile application security solutions are key to ensuring the safety of these new services and to winning customers' trust.

Public Services

Mobile application security plays a pivotal role in safeguarding sensitive government and public data against various types of cyberthreats. Mobile app security is critical in safeguarding data at rest, in transit and at use, and ensuring compliance with regulatory requirements. The mobile application security testing process helps organizations identify risks and vulnerabilities that may lead to a compromise of confidential data.

SaaS Industry

SaaS industry is paramount in today's highly interconnected world. The increasing adoption of mobile SDK integrations by SaaS providers for their customers creates multiple exposed surfaces for attacks by cyber threat actors. These actors capitalize on the exposure of these interfaces to collect data, hack into systems, and even potentially compromise end-user data. In today's environment, the entire SaaS infrastructure must be secured against cyber threats target a variety of vulnerable places within the ecosystem, including mobile devices, as well as individual end users.

Healthcare Industry

Digital health has provided a new approach towards patient delivery, service, and data management. Utilization of mobile applications, web portals and other digital platforms have resulted in an accelerated growth in the healthcare sector. However, with the increase in adoption of digital health, challenges like data protection, data security and privacy have arisen due to lack of cybersecurity measures. By implementing end to end mobile app security solutions, healthcare industry players can ensure that medical records and other sensitive data are safeguarded.

Automotive

Automotive players can gain a lot from investing in a reliable connectivity and cybersecurity solution. With an extremely secure connectivity solution, car manufacturers can design a robust and flexible platform that can support current and future services and applications. SecIron's multi-platform mobile application security solution allows automakers to provide a secure and safe driving experience through a secured connectivity transmission that communicates between the connected car and the driver's mobile application, delivering greater access to useful information.

Utility Industry

Utility services today are increasing their reliance on digital solutions and mobile applications in providing better, safer and a more convenient experience for their customers. Cyber threat actors are aggressively targeting these platforms as a means to exploit the potential vulnerabilities of these digital solutions and mobile applications. As cybercriminals continue to develop more sophisticated attacks against utility clients, it is essential that they adopt an effective approach in securing their ICT environment and the data used in providing customers with a rich, connected experience.

SketchUp

With more than 41 million professionals and hobbyists, SketchUp is the most widely used 3D modeling tool in the world.

About Product

SketchUp for iPad
SketchUp for iPad is the new, versatile way to create, edit, and view 3D models whether you're on a job site, on the go, or in the office. With support for Apple Pencil, multi-touch gestures, and mouse and keyboard, you can harness the power of 3D your way. Quickly draw, swipe, and click to bring form to your creative vision.

3D Modeling
Intuitive and simple way to draw accurately in 3D to produce detailed, professional grade models and documents.

Extension Warehouse
There are hundreds of third-party add-ons to extend the tools and features of SketchUp. Improve workflows by reducing time-consuming, complex, or repetitive processes. There are extensions for photorealistic rendering, reporting, parametric modeling, animation, and more.

Solution Portfolio

Architecture
Bring your sketches to life
From schematic design to construction documentation, SketchUp's 3D architectural design software gets the (whole) job done.

Commercial Interiors
Design for business
From tenant improvements to corporate interiors, SketchUp's suite of commercial 3D modeling products gets the (whole) project done.

Construction
Build confidently
Use 3D construction modeling software from SketchUp to prevent rework, coordinate more effectively, and build it right the first time.

Kitchen, Bath, and Interior Design
Exquisite interiors, your way
From kitchens and baths to home remodels, SketchUp is 3D interior design software that brings your ideas to life.

Landscape Architecture
Move mountains with your design
From planters to parks, landscape architects use SketchUp to bring their ideas to life.

Residential Construction
Build confidently and efficiently
From big idea to build, SketchUp is 3D construction software that gets the (whole) project done.

Urban Planning
The big picture, at your fingertips
From massing model to proposal, SketchUp is 3D urban design software that helps planners get the (whole) job done.

Woodworking
The best tool for any job
SketchUp is an easy-to-use 3D modeler that lets you think through and pre-build projects on the computer before you tackle them in real life.
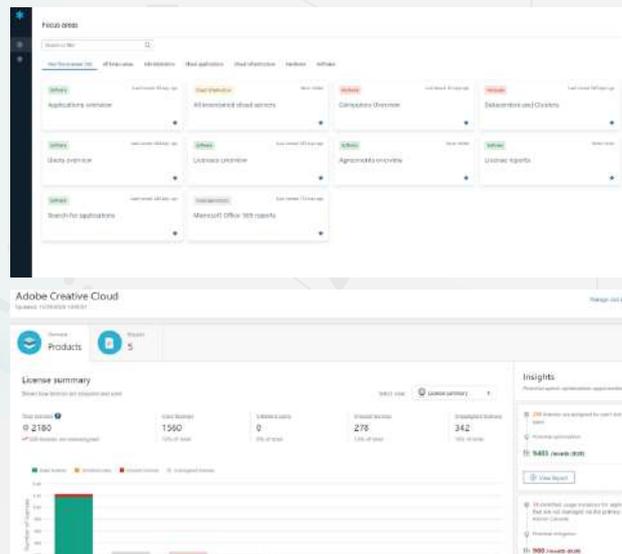

3D Printing
Make what you imagine
SketchUp is modeling software for 3D printing that's simple, fun, and predictable.

Snow Software is the only unified cloud-native platform delivering actionable insights on your IT environment. Bringing together SaaS management, software asset management and cloud cost management, you can optimize IT spend, rein in cost, mitigate risk and drive value from all your technology.

About Product

At Snow Software, security and compliance are amongst our highest priorities. Our ever-expanding security and compliance program is informed by both industry standards as well as customer needs across a range of verticals. With a committed approach to security and compliance, our customers can rely on Snow products and services to meet their security requirements.

Solution Portfolio

Technology Intelligence

Snow Atlas
Harness next-generation Technology Intelligence in a platform built to inform decision-making and increase business value.

IT Visibility

- Asset Discovery & Inventory
  Automate discovery of technology assets across end user devices, data centers and SaaS applications.
- Software Asset Management
  Manage software assets across hybrid environments to optimize spend and minimize compliance and security risk.
- Engineering Application Management
  Take control of costs while maximizing availability of your specialized engineering applications.

Risk Mitigation

- Audit Defense
  Proactively ensure an accurate license compliance position to defend confidently against vendor audits.
- Security Vulnerabilities
  Identify application vulnerabilities and obtain recommendations for remediation.

Hybrid Cloud Management

- Cloud Cost Optimization
  Monitor and act on savings recommendations to manage your public cloud costs.
- Snow Cloud Control
  Monitor, govern and optimize your entire cloud environment – from servers to SaaS.
- Microsoft
  Maximize your Microsoft investment by optimizing licenses across data center, installed and cloud applications.
- VMware
  Access a complete inventory and right-size VM resources.
- Oracle
  Manage complex Oracle licenses and control spend with our Oracle-verified solution.
- IBM
  Identify PVU-based products and leverage sub-capacity pricing to proactively manage your IBM licenses.

Hybrid Cloud Management

- Self-Service IT
  Streamline IT service delivery and increase business agility.
- Cloud Automation & Orchestration
  Create a customized self-service portal and catalog and then automate provisioning.
- Cloud Governance
  Govern multi-cloud environments without slowing down users.
- Cloud Managed Service Providers
  MSPs can showcase a comprehensive and integrated suite of hybrid cloud services.

Award

VISUAL COMPONENTS
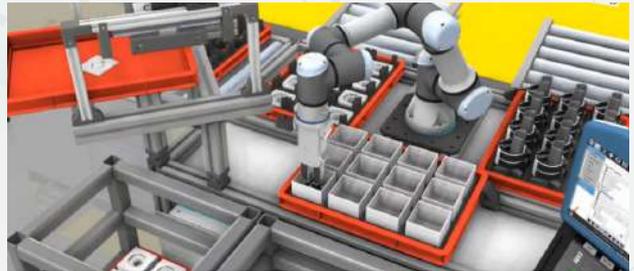

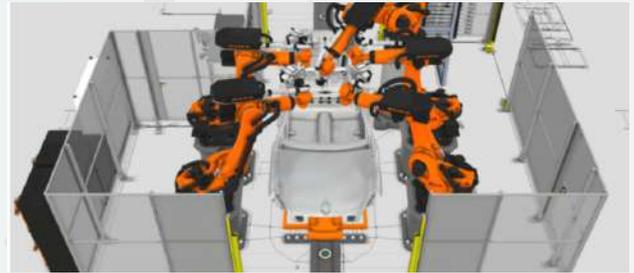

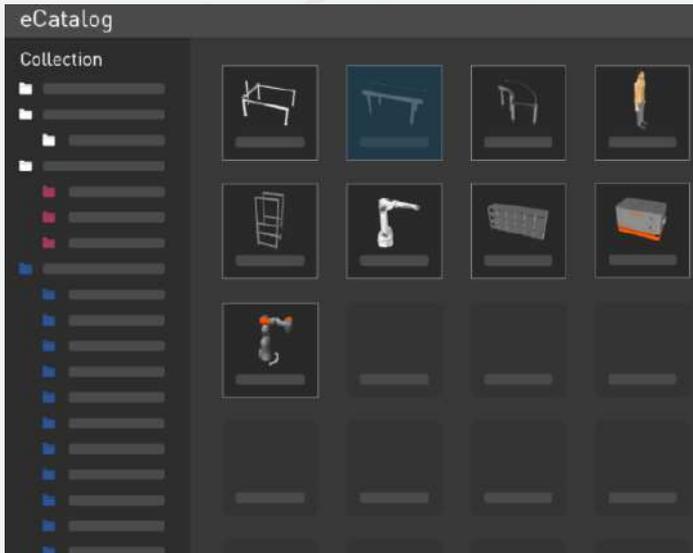

Design the factories of the future

About Product

With over 20 years in business, Visual Components is one of the pioneers of the 3D manufacturing simulation industry.

Solution Portfolio

How Does 3D Simulation

Simulate Your Concepts in Minutes

Design your concepts quickly using readymade 3D models with plug-and-play features. Add life to static designs and simulate the conceptual layouts without technical skills.

Maximize Efficiency

Collect simulation data for insights into your operations and production assets. Test out different scenarios to optimize your production output, resource utilization, and use of floor space. Maximize the efficiency of your systems.

Minimize Risks

Whether you're building a new factory, expanding your current facility, or automating your processes, simulation provides you a virtual sandbox to test your plans in advance, spot the hidden issues, and minimize the investment risks.

Replicate the Real World

Connect the simulations with physical assets like PLCs and robot controllers. Create digital twins and carry out virtual commissioning of your projects. Shorten your automation project delivery times.

VERSA
NETWORKS

Available via the cloud, on-premises, or as a blended combination of both, Versa SASE connects Enterprise branches, teleworkers, and end users securely and reliably to applications in the cloud or data centers around the world.

About Product

Versa is unique among SASE vendors, providing an end-to-end solution that both simplifies and secures the modern network. Versa SASE, based on VOS™, delivers a broad set of capabilities via the cloud and on-premises for building agile and secure enterprise networks, as well as highly efficient managed service offerings.

Solution Portfolio

Versa SASE is uniquely applicable to the individual end-to-end security, networking, SD-WAN, and analytics requirements of multiple industries.

Architecture

Building smart, sustainable cities and buildings tops the priority list of most governments today.

Education

Digital transformation presents endless possibilities for educational institutions to evolve and meet the demands of today's administrators, educators, and students..

Energy & Utilities

Energy and utility companies, typically including electricity, natural gas, and public services, are highly distributed in nature, with branch offices and remote sites widely spread out across distant geographies.

Engineering & Construction

Engineering and construction organizations have an ever-changing nature of the construction projects, rough work conditions, and legions of people involved

Federal Government

Versa provides a minimalistic and ready-to-use solution for all your needs. In a world where IT modernization and cloud transformation are exponentially growing, the government is expected to follow suit.

Financial Services

In the digital-first era, customers seek fast and 24/7 access to financial services, whether it is to make deposits, avail loans, claim insurance, make investments, or check balances.

Healthcare

New-age technological advancements are providing the healthcare sector with new and innovative ways of managing and delivering patient services while improving profitability.

Hospitality

Privacy laws and protection of client and IP data is mission critical for legal forms. With digital transformation paving the way for new opportunities and amplified efficiency to protect sensitive data, the legal sector is leaning in, making new technology adoption a key priority.

Legal

Privacy laws and protection of client and IP data is mission critical for legal forms

Manufacturing

The manufacturing sector today is fiercely driven by the aspirations of Industry 4.0 and 'Smart Factories', where traditional manufacturing practices and modern digital technologies come together to streamline processes, improve efficiency, and reduce overhead costs.

Public Sector

In addition, advances in digital society demands are compelling government agencies to reinvent their operations for streamlining workflows

Retail

Retailers need to deliver a world-class experience for their customers in omni-channel ways to increase customer acquisitions and retentions.

Satellite ISPs

Satellite service providers offer state-of-the-art networking and communication services for a wide variety of customers such as government and military entities, large private enterprises, and aeronautical organizations.

Technology

Technology explosion, increasing consumer demands, growing market disruptors, unpredictable geo-political conditions are all compelling technology companies to jump-start their digital transformation efforts.

Transportation

Transportation and logistics organizations are tapping into the advantages of new digital technologies to streamline operations and drive profitability.

Award
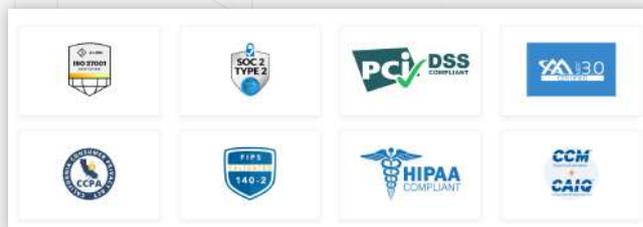

V-Ray is a computer-generated imagery rendering software application developed by the Bulgarian company Chaos Group. V-Ray is a commercial plug-in for third-party 3D computer graphics software applications and is used for visualizations and computer graphics in industries such as media, entertainment, film and video game production, industrial design, product design and architecture

About Product

V-Rays for Revit

PROFESSIONAL RENDERING FOR ARCHITECTS & DESIGNERS

V-Ray for Revit lets you render professional, high resolution images with realistic lights, materials, and cameras. V-Ray for Revit is built to handle your biggest building models. V-Ray is fast. Render quickly and make design decisions faster.

V-Rays for Rhino

POWERFUL RENDERING FOR DESIGNERS

V-Ray for Rhino comes with all the lighting, shading, and rendering tools you need to create professional, photoreal imagery. Built to handle your biggest projects and your most detailed scenes. Render anything you can imagine with V-Ray for Rhino.

V-Rays for SketchUp

PROFESSIONAL RENDERING FOR ARCHITECTS & DESIGNERS

V-Ray for SketchUp comes with all the lighting, shading, and rendering tools you need to create professional, photoreal imagery and animations. Built to handle your toughest projects and biggest scenes, V-Ray gives you the power to render anything and everything in SketchUp.

V-Rays for Render Nodes

ADD MORE RENDER POWER

V-Ray Render Nodes support network & distributed rendering on the following applications:
- V-Ray for 3ds Max
- V-Ray for Maya
- V-Ray for Modo
- V-Ray for Cinema 4D
- V-Ray for Nuke
- V-Ray for Katana

And many more!

V-Rays for Maya

POWERFUL RENDERING FOR ARTISTS

Production-proven ray traced rendering with a full suite of tools to create professional photoreal imagery and animations. Built to handle the absolute toughest projects and largest scenes.

V-Rays for 3DS-Max

PROFESSIONAL RENDERING FOR ARTISTS & DESIGNERS

V-Ray comes with all the lighting, shading, and rendering tools you need to create professional, photoreal imagery and animation. Built to handle your biggest projects and your toughest scenes. Render anything and everything with V-Ray.

Solution Portfolio

Architectural

Architectural rendering is the process of taking an architect's design and using software to create 2D and 3D photorealistic visualizations. These allow everyone involved in a project to see into the future and find out how a building will look. They also make it easier to make decisions and create better designs.

Interior design

From living space to workplace, designers look to V-Ray's Emmy and Academy Award-winning 3D rendering software to visualize the world's best interiors. Render photorealistic interiors you can feel. Real lighting. Real materials. It's as close as you can get to the real thing without actually building it.

Product design

For next-gen headsets, wearables, smartphones and more, designers look to V-Ray to visualize the future of design. With V-Ray's full suite of tools for materials, lighting and rendering, designers can render anything they imagine — from early concepts to final, photorealistic imagery. For any design project, V-Ray® connects seamlessly with their favorite 3D applications, including 3ds Max, Maya, Rhino and Unreal.

Automotive

Chaos V-Ray is the driving force behind the best automotive renders. From innovative design concepts for electric and autonomous vehicles to Super Bowl spots and auto show launches, V-Ray renders the absolute highest quality for the biggest stage.

Advertising

V-Ray helps advertising agencies and brands tell stories that stick. For story-driven campaigns in any medium. Big brands and top agencies get their most creative by rendering with V-Ray. With V-Ray's full suite of tools, artists can render anything imaginable — from early ideas to final, photorealistic imagery and animation for print, web, TV and VR. For any advertising project, V-Ray® 3D rendering software connects seamlessly with top 3D applications, including 3ds Max, Maya, and Cinema 4D.

Games

V-Ray brings cinematic quality to any game world. From Indie to Triple-A, V-Ray helps game developers tell their story in the most immersive way possible. With V-Ray's full suite of tools, artists can render anything imaginable — from detailed characters and creatures, to entire battle-scarred worlds. No matter if you're rendering an army of orcs, a battalion of banshees, or a fleet of fighters, V-Ray® is ready for action and built to handle your most critical missions.

Television VFX

Academy Award-winning rendering technology for high-end television effects and animation. V-Ray lets you render anything. And everything. From heroes and creatures to vehicles and environments, V-Ray helps artists deliver invisible and blockbuster effects for Emmy-winning television.

Film VFX

Academy Award-winning rendering for high-end film effects & animation. V-Ray brings visual effects to life. From heroes and creatures to vehicles and environments, V-Ray has helped artists deliver invisible and blockbuster effects for over 150 feature films.
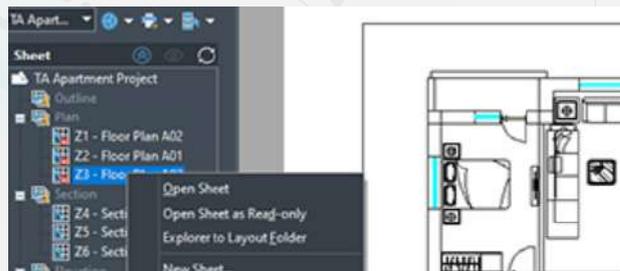

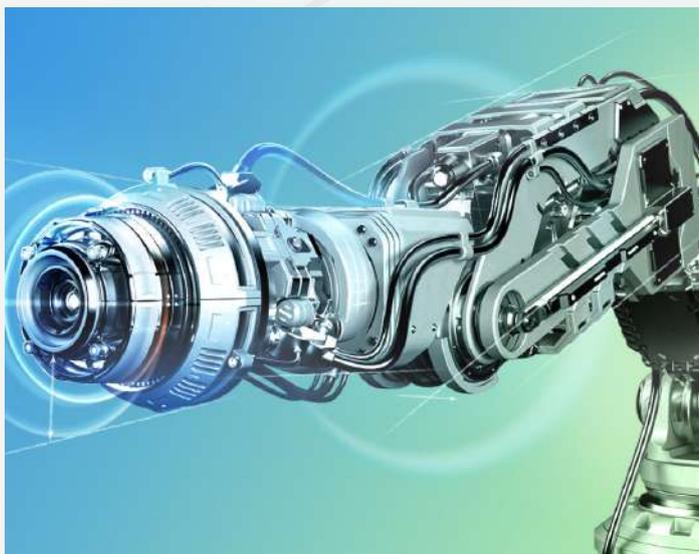

V-Ray for developers

3D Design & CAD software

Give your customers exactly what they want — the best user experience. By integrating V-Ray's powerful, yet easy to use, rendering software right into your 3D design or CAD application, you give users the power to visualize their designs in a whole new way.

ZWCAD

As the world's leading CAD/CAM software and services provider listed on the New Third Board, ZWSOFT is the only software company possessing independent intellectual property rights for both 2D CAD (ZWCAD) and 3D CAD/CAM (ZW3D) in China. With three R&D Centers in Guangzhou, Wuhan and Florida, and years of industry application experience and strong R&D strength, professional and reliable CAD/CAM solutions are provided to worldwide users from various industries to satisfy their diverse needs of business development.

About Product

ZWCAD Mechanical

Simple Design for Sophisticated Outcomes

ZWCAD Mechanical for manufacturing provides abundant tools such as shaft generator, tolerance dimension, surface texture symbol, balloon and BOM and standards parts for mechanical 2D sheet drawing.

CAD Pockets

CAD Pockets Brings You A Productive Design Time

Open, edit and annotate easily on .dwg drawings anytime anywhere with online storage.

ZWCAD Viewer

Light, Easy, Free

Your Best DWG Viewer. View CAD files quickly and easily be it 2D or 3D ZWCAD Viewer views all.

Solution Portfolio

Solutions for the Manufacturing Industry

We offer complete CAD solutions for intelligent manufacturing, including ZWCAD, ZW3D, ZWCAD Mechanical, and others. All of these software significantly increase design efficiency and enhance innovation capabilities for companies.

ACAPacific

Your Trusted IT Distribution since 1986

Leading Regional Value Added IT Distributor

ACA Pacific is an established Regional Value-Added Distribution Company since 1986. Serving the Asia-Pacific region more than 30 years, out forte is in selection and integrating the "Best-of-Breed" software and hardware to meet changing business dynamics.
